

Supplementary Table 5. Associations between duration of exclusive breastfeeding, overweight¹ and BMI z-score at age 7 years for infants ≥ 2.5 SD weight for age at 5 months, n=316.

Exposure breastfeeding	OR crude	95% CI	OR adjusted^{2,3}	95% CI
≤2 months	1.31	(0.66, 2.59)	1.05	(0.48, 2.27)
>2- <4 months	1.06	(0.59, 1.90)	1.01	(0.54, 1.91)
≥4 months	1.00	-	1.00	-
	β crude	95% CI	β adjusted^{2,3}	95% CI
≤2 months	0.29	(-0.01, 0.60)	0.14	(-0.16, 0.43)
>2- <4 months	0.04	(-0.21, 0.30)	0.00	(-0.23, 0.24)
≥4 months	0.00	-	0.00	-

¹Overweight is categorized according to the International Obesity Task Force reference, ²Adjusted for: maternal pre-pregnancy BMI, paternal BMI, maternal smoking during pregnancy (continuous), maternal physical activity during pregnancy (3 levels), weekly gestational weight gain, socio-economic status of the mother (3 levels) child sex and birth weight (continuous), ³Test for trend was non-significant, p>0.05.
