Supplementary Fig. 1

**Supplementary Fig. 1. Effects of GαsQL on NHEJ repair of I-SceI endonuclease –
induced DSBs.** The cells (A, SK-MEL-28 cells; B, HeLa cells; C, A549 cells) were
cotransfected with GαsQL and GFP fluorescent reporter plasmids linearized by I-SceI
endonuclease using Lipofectamine 3000, and harvested after 24 h for flow cytometric
analysis.
