SUPPLEMENTARY FIGURE LEGENDS

<u>Supplementary figure 1</u>. Representative flow cytometry analysis of hMSC-emp or hMSC-IL6i cells transfected at <95%. Empty histograms are untransduced MSCs. Filled grey histograms are transduced MSCs.

Supplementary figure 2. IL-6 silencing does not trigger cell death. hMSC-emp or hMSC-IL-6i cells were cultured overnight in standard medium (-) or supplemented with IL-6 (20 ng/ml). Apoptosis was analyzed by FACS by Annexin-V DY634 and propidium iodide (PI) staining (the percentage of Annexin-V positive/PI negative cells is shown) on GFP + cells. Graph represents the mean of two independent experiments.

Supplementary figure 3. Uncropped blot image of bands shown in Figure 1 B. The cropped bands are framed within the black square.

Supplementary figure 4. Uncropped blot image of bands shown in Figure 5A and 5C. Handwritten tags indicate the sample loaded in each lane. MSC-emp (plv) & IL6i1 (MSC-IL6i)

<u>Supplementary figure 5.</u> Uncropped blot image of bands showen in figure 5B, upper panel. The cropped bands are framed within the black square.

<u>Supplementary figure 6.</u> Uncropped blot image of bands shown in Figure 5B, lower panel. The cropped bands are framed within the black square.
