

**Figure S4. Drug resistance screening by OD measured growth.** Growth of indicated strain in the presence of varying concentrations ( $\mu\text{g/ml}$ ) of sulfamethoxazole (A), para-amino salicylic acid (B), or pyrazinamide (C) as measured by OD<sub>600</sub> after 6 days of growth. INH 0.04 $\mu\text{g/ml}$  was also tested as a control. Bars represent the mean and standard deviation of two replicates. Difference in means were tested by Dunnett's multiple comparison test after two-way ANOVA. \*\*\*\*  $p < 0.0001$
