Vacuolar	0.0	0.0	0.0	0.00	0.02

Supplementary Figure S1. *In silico* predictions of cellular localization(s) of ShNPSN11

. Cellular compartments are denoted on the left. LocDB are scores based on the query protein's homology(ies) with proteins of known localization. PotLocDB are scores based on the query protein's homology(ies) with non-experimentally determined localizations, yet theoretical evidence exists. Neural Net scores are assigned by neural networks. Pentamers are based on comparisons of distributions calculated for the query sequence and existing database (DB) sequences. Integral scores are representative of the aforementioned (4) scores. A plasma membrane localization prediction score of 9.2 was calculated for SNARE13. A transmembrane spanning region from amino acids 212 to 236 was identified. A potential GPI anchoring site was identified at amino acid 253. LocDB, <https://www.rostlab.org/services/locDB/>; PotLocDB, <http://www.softberry.com/berry.phtml?topic=protcomp&group=help&subgroup=proloc>

Supplementary Figure S2. The expression of *PR1*, *PR3*, and *PR5* in *ShNPSN11*-silenced plants. mRNA transcript levels of *PR1*, *PR3*, and *PR5* in control (CK) and TRV2:*ShNPSN11*-silenced tomato leaves at 24 hpi as determined by quantitative real-time PCR. Error bars represent the standard variation of the mean among three independent replicates.

Primer name	Sequence (5'- 3')
<i>SIGDPH-F</i>	CCATCACAGCCACTCAGAAGAC
