

OPEN PEER REVIEW REPORT 2

Name of journal: Neural Regeneration Research

Manuscript NO: NRR-D-20-00001

Title: Engineering mesenchymal stromal/stem cell-derived extracellular vesicles with improved targeting and therapeutic efficiency for the treatment of central nervous system disorders

Reviewer's Name: Saud A. Sadiq

Reviewer's country: USA

Date sent for review: 2020-1-11

COMMENTS TO AUTHORS

Excellent and well written article. Very few minor comments. Perhaps when comparing to cellular therapies a word of caution should be added that EV associated therapies have not been used in human trials so their "advantages" are based on animal data. Also mention should be made whether acellular treatments despite their ability to cross the BBB may be given intrathecally with greater efficacy.
