Supplementary Information

Supplementary Figure S1 Different issues while image acquisition process. Important parts are indicated by green arrows
a Light source is reflected on the lid **b** Mold growing inside the lid **c** Radicles of multiple seeds intersecting each other **d** Irregular germination, which doesn't result in a clear radicle **e** Water drop on the lid after radicle touches it **f** Poorly visible seed due to condensation on the lid **g** Intersection of different radicles **h** Different seeds too close to each other **i** Reflection of the camera module in images **j** Condensation inside petri dishes **k** Reflections of water around seeds (at the beginning of the germination experiment) **l** Radicle of one seed touches the coat of another seed

Supplementary Table S1 Additional statistics of the dataset for *Secale cereale*.

	# time series	# images	# non-germinated	# germinated	ratio non-germinated
train	64 (640 seeds)	6080	28581	32219	0.47
eval	8 (81 seeds)	760	3800	3897	0.494
test	9 (90 seeds)	855	4303	4247	0.503
sum	81 (811 seeds)	7695	36684	40363	-

Supplementary Table S2 Additional statistics of the dataset for *Pennisetum glaucum*.

sum	84 (814 seeds)	8148	56995	21963	-

Supplementary Table S4 Different hyperparameter pairs that were used while training. The hyperparameter set (HS) is a short reference in following results. The learning rate (lr) is used by gradient descent, the dropout-keep-probability (dkp) is the parameter used in Tensorflow's object detection api and is calculated as dkp = 1 - dropout rate.

	HS1	HS2	HS3	HS4	HS5	HS6	HS7	HS8	HS9	HS10	HS11	HS12
lr	3.6e-3	2.9e-3	1.2e-3	2.1e-4	6.5e-5	2.9e-5	5.3e-6	2.3e-6	9.9e-7	7.3e-7	5.4e-7	4.5e-7

Supplementary Figure S2 Relative error compared to the ground truth. The comparison cannot be done for 22h/24h intervals, as t₅₀ cannot be computed. Prediction based calculation is closer to ground truth for MGT and U **a** 60 seeds of *Secale cereale*. Intervals are measured in 5.5h and 11h intervals, as the experiment was stopped before 48h **b** 30 seeds of *Pennisetum glaucum* were compared

Supplementary Table S8 Detailed summary of germination indices for Zea mays. The value with the lowest error compared to the ground truth is shown in bold

Supplementary Table S11 Selection of germination indices for different timepoints in *Zea mays*. Predictions and ground-truth are based on 30 minute intervals and best value compared to ground truth is indicated in italic.

	Ground Truth	Predictions	6h (manual)	12h (manual)	24h (manual)
<i>MGT [h]</i>	28.7	30.7	31.5	34.3	42.2
<i>U [bit]</i>	5.2	5.0	2.3	1.3	0.8
<i>t₅₀ [h]</i>	28.3	31.5	28.4	28.9	32.4
