

FIGURE S1 Quantitative sensory testing showing z-scores indicating loss or gain in function on the 10 parameters. The comparisons were done confirmed CIPN in patients who had received A) docetaxel and B) oxaliplatin. . Patients with subclinical neuropathy are excluded (n = 2). Abbreviations: CIPN, chemotherapy-induced peripheral neuropathy; CDT, cold detection threshold; WDT, warm detection threshold; TSL, thermal s threshold; MDT, mechanical detection threshold; MPT, mechanical pain threshold; MPS, mechanical pain sensitivity; VDT, vibration detection thres
 * P value < 0.05
