

Figure S1. Verification of stable cell lines with p63 overexpression or knockdown. (A) Reverse transcription-quantitative PCR analysis and (B) western blotting were performed to verify the mRNA and protein levels, respectively, of p63 in ME-180/NC and ME-180/shp63 cell lines. (C) Reverse transcription-quantitative PCR analysis and (D) western blotting were performed to verify the mRNA and protein levels, respectively, of p63 in SiHa/Con and SiHa/p63 cell lines. NC, negative control; Con, control.
