

Supplementary Table I. Comparison of patient frequencies with Oligospermia, Oligoasthenospermia, Oligoasthenoteratospermia between the two groups

	TT<264 ng/dL (<i>n</i> =116)	TT≥264 ng/dL (<i>n</i> =737)	P-value
Oligospermia	97 (83.62%)	632 (85.75%)	0.54 ^b
Oligoasthenospermia	9 (7.76%)	46 (6.24%)	0.53 ^b
Oligoasthenoteratospermia	0 (0%)	5 (0.68%)	>0.99 ^c

Values are expressed as Number (*n*) and Percentage (%).

P value were calculated using ^b Chi-Squared test and ^c Fisher exact test
