Supplementary Materials: Adverse childhood experiences and risk of subsequently engaging in self-harm and violence towards other people - 'dual harm'

Box S1. Coding algorithm to extract information on hospital-treated self-harm.

There were two components to this algorithm, according to recording procedures in different time periods. From 1987 to 1993, admissions with a "reason for contact code" of 4 (suicide attempt) in the National Hospital Register [27] were identified as self-harm. From 1994 onwards, self-harm was identified from people meeting at least one of the following criteria in the National Hospital Register or Danish Psychiatric Central Register [28]: 'reason for contact code of 4; any psychiatric diagnosis (*ICD-10* chapter F) and a co-morbid diagnosis of poisoning with medication and biological compounds (*ICD-10* codes T36 to T50) or nonmedical compounds, excluding alcohol and poisoning from food (T52 through T60); any psychiatric disorder (*ICD-10* chapter F) and co-morbid diagnosis reflecting lesions on the forearm, wrist, or hand (*ICD-10* codes S51, S55, S59, S61, S65, or S69); any contact with a hospital because of poisoning with weak or strong analgesics, hypnotics, sedatives, psychoactive drugs, antiepileptics, and antiparkinsonian drugs or carbon monoxide (*ICD-10* codes T39, T42, T43, and T58); and any somatic or psychiatric diagnosis X60 to X84' [29].
