

Supplement I - Gene Listings

Seven genomic putative ORF translated databases were scored using the SM² methodology described. The databases are from:

[ftp.ebi.ac.uk/pub/databases/SPproteomes/fasta_files/proteomes/](ftp://ftp.ebi.ac.uk/pub/databases/SPproteomes/fasta_files/proteomes/)

The seven databases (including their designator from [ftp.ebi.ac.uk](ftp://ftp.ebi.ac.uk)) are:

- 3702 - *Arabidopsis*
- 6239 - *C. elegans*
- 7227 - *Drosophila*
- 83333 - *E. coli*
- 9606 - Human
- 10090 - Mouse
- 4932 - *S. cerevisiae*

For each genome, only the putative methyltransferases are shown. Genes considered 'known' were scored as either a methyltransferase or not, this information was used to establish, for each putative, the cumulative percent methyltransferases of the known genes up to that point.

The *Saccharomyces cerevisiae* database used here is different than the one used earlier in this chapter. Additionally, scoring of this database was performed as per the other 6 genomes in this section for consistency.
