

Figure S1. Treatments received prior to initiation of vonoprazan. (A) Previous treatments before vonoprazan therapy included esomeprazole (20 mg/day), lansoprazole (30 mg/day), rabeprazole (10 mg/day) and famotidine 20 mg/day. (B) A total of 11 (73%) patients received a prokinetic agent and 4 did not before vonoprazan treatment.
