

- 1 **Supplementary information for STRUCTURAL BASIS FOR NUCLEAR IMPORT**
- 2 **SELECTIVITY OF PIONEER TRANSCRIPTION FACTOR SOX2**
- 3 Jagga et al

4 Supplementary Figure 1. The SOX2x3Mut protein is severely impaired in its ability to
 5 maintain long-term self-renewal of SOX2-deleted NSC. (A) Cumulative growth curve of
 6 SOX2-deleted (*Sox2^{-/-}*) NSC (mutant 2; duplicate of mutant 1 in Figure 4) transduced
 7 with wild type SOX2, or SOX2x3Mut, or empty vector (EV). (B) Number of cells
 8 recovered at each passage, after plating 20000 cells.

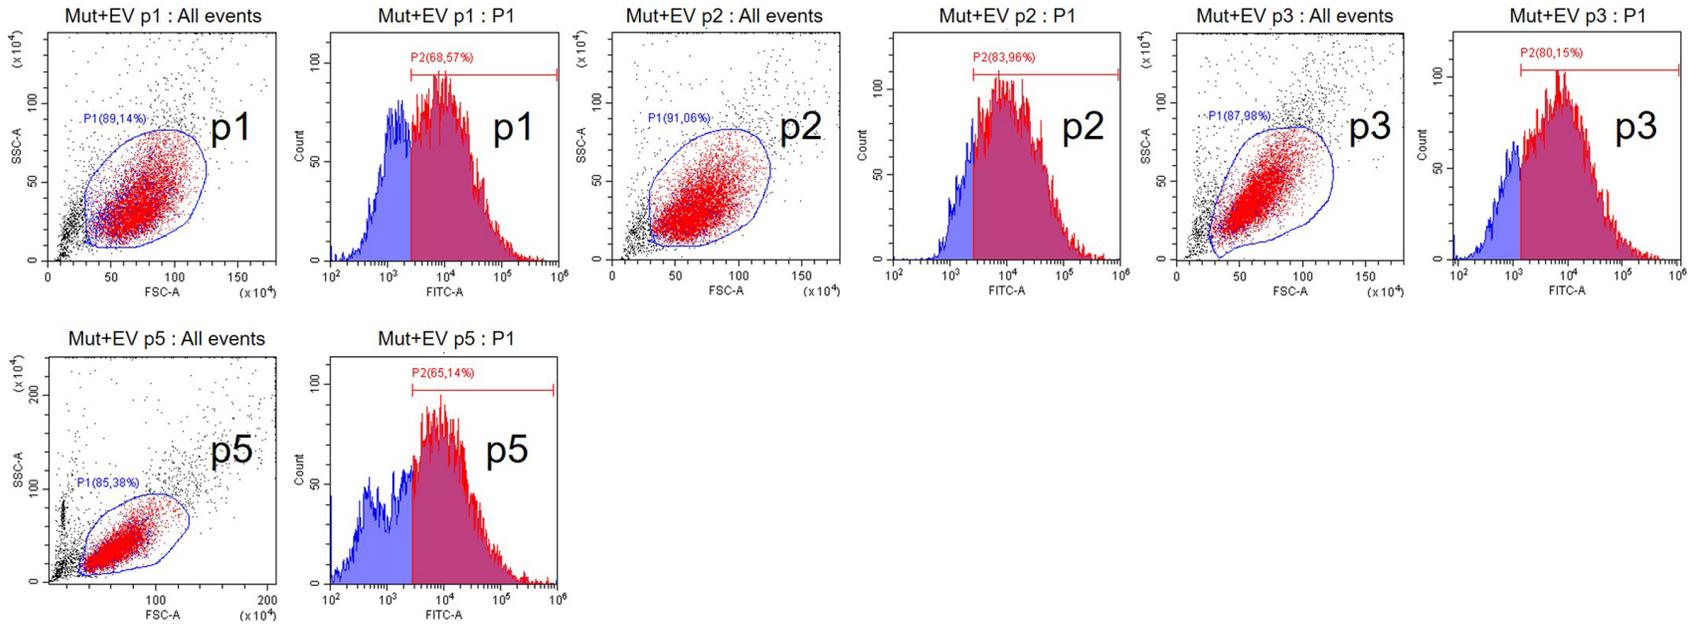

9
 10
 11

12 Supplementary Figure 2. FACS analysis of Sox2-deleted cells for GFP expression,
13 marking cells transduced with the indicated vectors, at different passages. A: non
14 transduced mutant (control); B: mutant transduced with empty vector (EV) at passage 1
15 (p1), passage 2 (p2), passage 3 (p3) and passage 5 (p5); C: mutant transduced with the
16 wild type Sox2 vector, at passages p1, p2, p3, p4, p5 and p13; D: mutant transduced
17 with the Sox2-3x-mut vector, at passages p1, p2, p3, p4, p5 and p13. mut indicates
18 mutant cells (mutant 1). The GFP-positive cells are shown in red. Gating strategy to
19 determine GFP-positive cells is represented in blue (P1 gate) in SSC-A vs. FSC-A dot
20 plots.

25
26

27 Supplementary Figure 3. Ectopic expression of wildtype and Dichaete3xMut. PtcGal4,
28 UAS-GFP / TM6B was crossed to either UAS-Dichaete.WT / TM6B or UAS-
29 Dichaete.xMut. Ptc-Gal4, UAS-GFP / UAS-Dichaete (WT or 3xMut) progeny numbers
30 were compared with sibling Ptc-Gal4, UAS-GFP or UAS-Dichaete (WT or 3xMut) /
31 TM6B (n = 3, where n represents three independent experiments). Data are presented
32 as mean values +/- SEM. Expression of UAS-Dichaete.WT driven by Ptc-Gal4 results in
33 complete lethality whereas expression of UAS-Dichaete.3xMUT results in survival of
34 adults.
35

36
37

38 Supplementary Figure 4. Alignment of IMP α isoforms. Residues involved in binding at
 39 the IMP α 3:SOX2 interface are boxed, and reveal a highly conserved cargo-binding
 40 interface.

43 Supplementary Figure 5. The different positioning of ARM domain 7 is constant within
44 each respective IMP α subfamily. The incompatible positioning of SOX2 in ARM 7 of
45 IMP α 2 and IMP α 5 prevents the full interaction interface observed in IMP α 3. Conversely,
46 IMP α 3 has not repositioned ARM7 to accommodate the additional interaction interface
47 of SOX2. The reference structures within this study are coloured blue. Structures
48 superimposed on IMP α 2 include: PDB 5V5P in cyan, 3UL1 in yellow, 3UKX in green,
49 4O1H in salmon, and 5B56 in orange. Structures superimposed on IMP α 3 include: PDB
50 5TBK in cyan, 6BW9 yellow, 4UAI in green, 5XZX in salmon, and 6BVV in orange.
51 IMP α 5 include: 4B18 in cyan, 3TJ3 in yellow, and 2JDQ in green.

54 Supplementary Figure 6. Uncropped gels for figures presented in Figure 3A.

55

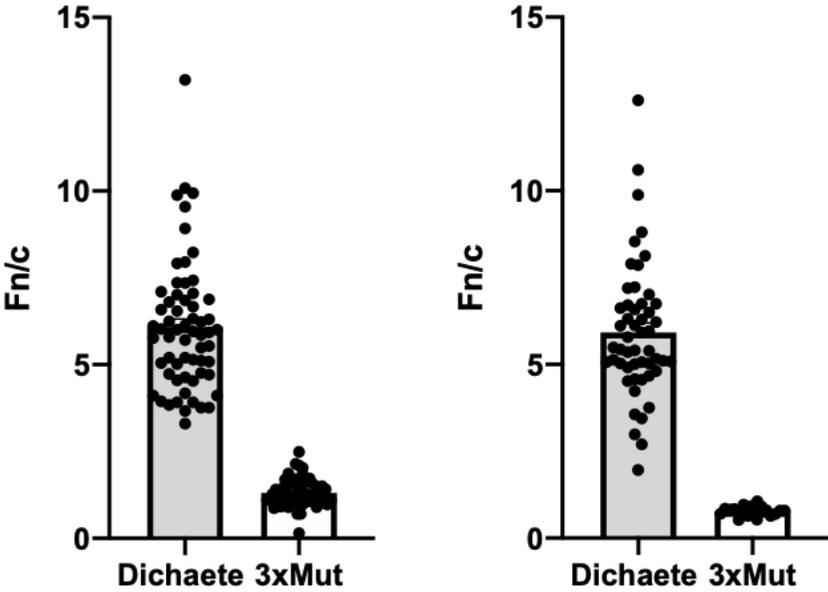

56

57 Supplementary Figure 7. Distribution of data points for Figure 4f.
58

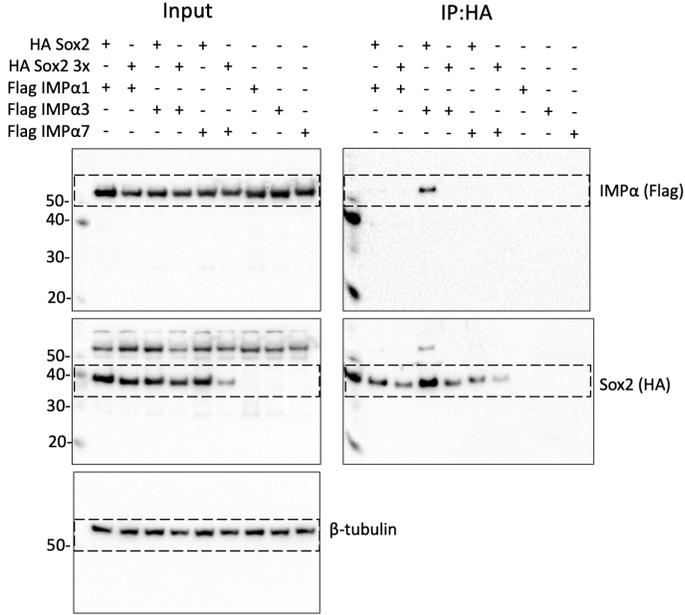

59
60

61 Supplementary Figure 8. Distribution of data points shown in Figure 5. Quantification of
62 fluorescence in the nucleus compared to the cytoplasm (expressed as Fn/c). Salivary
63 gland cells (left), salivary duct cells (right).
64

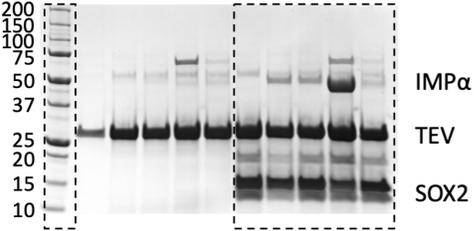

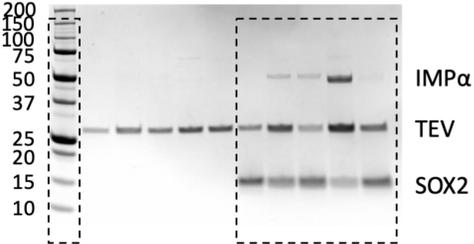

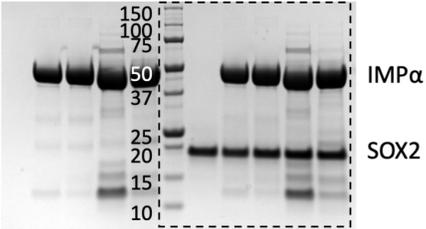

65
66

67 Supplementary Figure 9. Uncropped gels for Western blot presented in Figure 6A.
 68 Western blots for the whole cell lysates were run in duplicate in parallel; one membrane
 69 was first probed with anti-Flag to detect Flag-tagged IMPA followed by anti-HA to detect
 70 HA-tagged Sox2. The second membrane was probed for b-tubulin.
