

Figure S7. Relations of Overnight MST Improvement with N3 Sleep parameters. a) Spindle density at Cz on the MST night plotted against overnight MST improvement by group for the placebo and b) eszopiclone visits. c) Density of spindle-SO events on the MST night plotted against overnight MST improvement, averaged over the placebo and eszopiclone visits, in the cluster showing a non-significant correlation ($p_{uncorrected} < .05$, inset). The regression line for the combined groups and visits is shown.
