## **Supplementary File 1**

## Standards for Reporting Implementation Studies: the StaRI checklist for completion

The StaRI standard should be referenced as: Pinnock H, Barwick M, Carpenter C, Eldridge S, Grandes G, Griffiths CJ, Rycroft-Malone J, Meissner P, Murray E, Patel A, Sheikh A, Taylor SJC for the StaRI Group. Standards for Reporting Implementation Studies (StaRI) statement. *BMJ* 2017;356:i6795

The detailed Explanation and Elaboration document, which provides the rationale and exemplar text for all these items is: Pinnock H, Barwick M, Carpenter C, Eldridge S, Grandes G, Griffiths C, Rycroft-Malone J, Meissner P, Murray E, Patel A, Sheikh A, Taylor S, for the StaRI group. Standards for Reporting Implementation Studies (StaRI). Explanation and Elaboration document. *BMJ Open* 2017 2017;7:e013318

Notes: A key concept of the StaRI standards is the dual strands of describing, on the one hand, the implementation strategy and, on the other, the clinical, healthcare, or public health intervention that is being implemented. These strands are represented as two columns in the checklist.

The primary focus of implementation science is the implementation strategy (column 1) and the expectation is that this will always be completed.

The evidence about the impact of the intervention on the targeted population should always be considered (column 2) and either health outcomes reported or robust evidence cited to support a known beneficial effect of the intervention on the health of individuals or populations.

The StaRI standards refer to the broad range of study designs employed in implementation science. Authors should refer to other reporting standards for advice on reporting specific methodological features. Conversely, whilst all items are worthy of consideration, not all items will be applicable to, or feasible within every study.

Checklistitem		Reported	Implementation Strategy	Reported on page #	Intervention
		on page #			
			"Implementation strategy" refers to how the intervention was implemented		"Intervention" refers to the healthcare or public health intervention that is being implemented.
Title and abstra	ct			·	
Title	1	1	Identification as an implementation study, and description of the methodology in the title and/or keywords		
Abstract	2	1	Identification as an implementation study, including a description of the implementation strategy to be tested, the evidence- based intervention being implemented, and defining the key implementation and health outcomes.		
Introduction					
Introduction	3	2	Description of the problem, challenge or deficiency in healthcare or public health that the intervention being implemented aims to address.		

Rationale	4	2	The scientific background and rationale for the	2	The scientific background and rationale for the	
			implementation strategy (including any underpinning		intervention being implemented (including evidence	
			theory/framework/model, how it is expected to achieve		about its effectiveness and how it is expected to	
			its effects and any pilot work).		achieve its effects).	
Aims and objectives	5	2	The aims of the study, differentiating between implementation objectives and any intervention objectives.			
Methods: desci	ription					
Design	6	3, Suppleme ntary File 2	The design and key features of the evaluation, (cross referencing to any appropriate methodology reporting standards) and any changes to study protocol, with reasons			
Context	7		The context in which the intervention was implemented. (Consider social, economic, policy, healthcare, organisational barriers and facilitators that might influence implementation elsewhere).			
Targeted	8	3,	The characteristics of the targeted 'site(s)' (e.g	3,	The population targeted by the intervention and any	
'sites'		Suppleme	locations/personnel/resources etc.) for implementation	Suppleme	eligibility criteria.	
		ntary File 2	and any eligibility criteria.	ntary File 2		
Description	9	3,	A description of the implementation strategy	3,	A description of the intervention	
		Suppleme		Suppleme		
		ntary File		ntary File		
		2		2		
Sub-groups	10	N/A	Any sub-groups recruited for additional research tasks, and/or nested studies are described			
Methods: evalu	ation					
Outcomes	11	3-5	Defined pre-specified primary and other outcome(s) of	3-5	Defined pre-specified primary and other outcome(s) c	
			the implementation strategy, and how they were		the intervention (if assessed), and how they were	
			assessed. Document any pre-determined targets		assessed. Document any pre-determined targets	
Process evaluation	12	3	Process evaluation objectives and outcomes related to the mechanism by which the strategy is expected to work			

<b>Feenemie</b>	42	N1 / A		N1 / A			
Economic	13	N/A	Methods for resource use, costs, economic outcomes	N/A	Methods for resource use, costs, economic outcomes		
evaluation			and analysis for the implementation strategy		and analysis for the intervention		
Sample size	14	3	Rationale for sample sizes (including sample size calculations, budgetary constraints, practical considerations, data saturation, a				
			appropriate)				
Analysis	15	3,	Methods of analysis (with reasons for that choice)				
		Suppleme					
		ntary File					
		2					
Sub-group	16	N/A	Any a priori sub-group analyses (e.g. between different sites in a multicentre study, different clinical or demographic				
analyses			populations), and sub-groups recruited to specific nested research tasks
