**Figure S-1.** Consistency of subcellular location annotations of different cell lines between the HPA (version 19) and UniProtKB/Swiss-Prot database (version 2019\_07). The numbers below cell lines are the numbers of proteins that were used in statistics.

**Figure S-2.** Consistency of subcellular location annotations of 57 tissues between the HPA (version 19) and UniProtKB/Swiss-Prot database (version 2019\_07). The numbers after tissues are the numbers of proteins that were used in statistics.

**Figure S-3.** Protein location consistency across tissues and location marker  $P$  values of proteins in Kumar *et al* (reference 1). Each dot represents one protein, and the red ones represent the proteins that are marked as cancer-related in HPA.
