Table S3. Pairwise comparisons of area under the receiver operator characteristic curve of baseline mortality risk models and baseline mortality risk models plus early warning scores for in-hospital mortality and mortality within 7 days of admission among patients with suspected sepsis

| | | In-hospital mortality | | | | |
		Baseline model	SIRS	qSOFA	NEWS	REMS
Mortality within 7 days	Baseline model		*0.02	***<0.001	***<0.001	***<0.001
	SIRS	**0.002		0.07	**0.002	***<0.001
	qSOFA	***<0.001	0.09		0.17	*0.02
	NEWS	***<0.001	*0.001	0.09		0.16
	REMS	***<0.001	***<0.001	**0.006	0.15	

Notes: comparisons of baseline risk model vs. + EWS were performed by likelihood ratio test for nested models, and other pairwise comparison were performed by bootstrap test.

Abbreviations: NEWS, National Early Warning Score; qSOFA, quick Sequential Organ Failure Assessment; REMS, Rapid Emergency Medicine Score; SIRS, systemic inflammatory response syndrome. Notes:- *p<0.05 **p<0.01 ***p<0.001
