

Supplementary Data 6 – TT-IgG and LPS ASC or memory B cells after conjugate or polysaccharide vaccination.

The number of TT-IgG or LPS-IgG specific antibody secreting cells (ASC) or memory B cells expressed as specific cell / 10⁶ cells was measured by ELISpot. Results for recipients of the Vi-TT vaccine are shown in the top row and for recipients of Vi-PS in the bottom row.

Significance was determined by a wilcoxon signed paired rank test. * p < 0.05, ** p < 0.01, *** p < 0.001, **** p < 0.0001, ns = not significant.

Vi-PS = Vi-polysaccharide vaccine; Vi-TT = Vi-tetanus conjugate vaccine
