Supplemental Information

Adaptive immunity to SARS-CoV-2 and COVID-19

Alessandro Sette and Shane Crotty

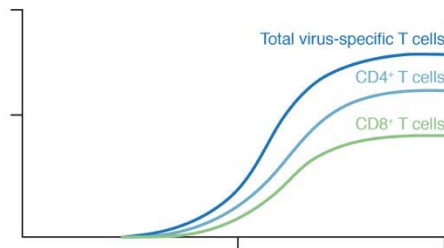

A. Viral loads

B. Innate immunity

C. T cell responses

D. Antibodies

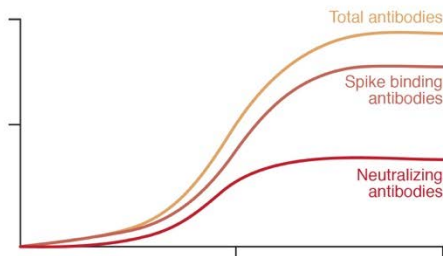

Figure S1. Model elaborations

- (A) Conceptual schematics of viral loads, elaborated to represent both URT and lungs.
- (B) Innate immune responses, elaborated to represent both blood (serum/plasma) cytokines/chemokines and local tissue innate immune responses, in an average case of COVID-19.
- (C) T cell responses, elaborated to individually show virus-specific CD4⁺ T cells and CD8⁺ T cells, in an average case of COVID-19.
- (D) Antibody responses, elaborated to show binding antibodies and neutralizing antibodies, in an average case of COVID-19.
