

Supplemental Table S4. Subgroup Analysis of the Association between Subclinical Hyperthyroidism and the Risk of Cardiovascular Events According to Iodine Intake

Subgroup	Pooled HR (95% CI)	I^2 , %	No. of studies
Ischemic heart disease			
Iodine intake			
Sufficient area	1.16 (0.91–1.48)	0	5
Deficient area	1.17 (0.92–1.48)	0	6
Stroke			
Iodine intake			
Sufficient area	1.03 (0.82–1.55)	36	2
Deficient area	1.37 (0.63–3.00)	62	3
Heart failure			
Iodine intake			
Sufficient area	1.73 (0.51–5.86)	83	2
Deficient area	1.12 (0.86–1.46)	29	2
CV mortality			
Iodine intake			
Sufficient area	1.36 (0.97–1.91)	44	5
Deficient area	1.14 (0.81–1.61)	55	10

HR, hazard ratio; CI, confidence interval; CV, cardiovascular.
