COREQ-Checklist for the manuscript "Chinese Medical Teachers' Cultural Attitudes influence Palliative Care Education: A Qualitative Study"

Domain 1: Research team and reflexivityPersonal characteristics1. Interviewer/facilitator correspondent authorMethods: Interview (p. 5)2. CredentialsNoneTitle page (p. 1)3. OccupationMedical studentMethods: Interview (p. 5)4. GenderFemaleMethods: Interview (p. 5)	No.	Item	Requested Information	Reference in Manuscript
Personal characteristics 1. Interviewer/facilitator correspondent author (p. 5) 2. Credentials None Title page (p. 1) 3. Occupation Medical student Methods: Interview (p. 5) 4. Gender Female Methods: Interview (p. 5) 5. Experience and training The interviewer was trained individually by co-authors F. Elsner and P. Piret Relationship with participants 6. Relationship established Contact about time, place and issue before the interviews was mostly carried out via E-Mail or messenger application. 7. Participant knowledge of the interviewer's desire to publish. They also knew the interviewer's occupation and her supporting institution, the German-Chinese Society of Medicine. 8. Interviewer characteristics The interviewer expected PC education structure in China to be low due to her previous work on a systematic review. She also expected difficulties in terms of sampling, language barrier and cultural barriers. No other expectations, to her best knowledge.	Domain 1:	Research team and		•
1. Interviewer/facilitator correspondent author (p. 5) 2. Credentials None Title page (p. 1) 3. Occupation Medical student (p. 5) 4. Gender Female Methods: Interview (p. 5) 5. Experience and training The interviewer was trained individually by co-authors F. Elsner and P. Piret Relationship with participants 6. Relationship established No special relationship. Contact about time, place and issue before the interviewer was mostly carried out via E-Mail or messenger application. 7. Participant knowledge of the interviewer's desire to publish. They also knew the interviewer's desire to publish. They also knew the interviewer's occupation and her supporting institution, the German-Chinese Society of Medicine. 8. Interviewer the interviewer expected PC education structure in China to be low due to her previous work on a systematic review. She also expected difficulties in terms of sampling, language barrier and cultural barriers. No other expectations, to her best knowledge.

Piret Relationship with participants 6. Relationship established Contact about time, place and issue before the interviews was mostly carried out via E-Mail or messenger application. 7. Participant knowledge of the interviewer's desire to publish. They also knew the interviewer's occupation and her supporting institution, the German-Chinese Society of Medicine. 8. Interviewer characteristics The interviewer expected PC education structure in China to be low due to her previous work on a systematic review. She also expected difficulties in terms of sampling, language barrier and cultural barriers. No other expectations, to her best knowledge.	1.	Interviewer/facilitator	Antonia Willemsen,	Methods: Interviewer
3. Occupation Medical student (p. 5) 4. Gender Female Methods: Interview (p. 5) 5. Experience and training individually by co-authors F. Elsner and P. Piret Relationship with participants 6. Relationship established No special relationship. Contact about time, place and issue before the interviews was mostly carried out via E-Mail or messenger application. 7. Participant knowledge of the interviewer's desire to publish. They also knew the interviewer's occupation and her supporting institution, the German-Chinese Society of Medicine. 8. Interviewer characteristics Characteristics Characteristics Characteristics Previous work on a systematic review. She also expected difficulties in terms of sampling, language barrier and cultural barriers. No other expectations, to her best knowledge.			*	(p. 5)
4. Gender Female Methods: Interview (p. 5) 5. Experience and training individually by co-authors F. Elsner and P. Piret Relationship with participants 6. Relationship established Contact about time, place and issue before the interviews was mostly carried out via E-Mail or messenger application. 7. Participant knowledge of the interviewer's desire to publish. They also knew the interviewer's occupation and her supporting institution, the German-Chinese Society of Medicine. 8. Interviewer characteristics The interviewer expected PC education structure in China to be low due to her previous work on a systematic review. She also expected difficulties in terms of sampling, language barrier and cultural barriers. No other expectations, to her best knowledge.		Credentials		Title page (p. 1)
5. Experience and training The interviewer was trained individually by co-authors F. Elsner and P. Piret Relationship with participants 6. Relationship established Contact about time, place and issue before the interviews was mostly carried out via E-Mail or messenger application. 7. Participant knowledge of the interviewer's desire to publish. They also knew the interviewer's occupation and her supporting institution, the German-Chinese Society of Medicine. 8. Interviewer characteristics The interviewer expected PC education structure in China to be low due to her previous work on a systematic review. She also expected difficulties in terms of sampling, language barrier and cultural barriers. No other expectations, to her best knowledge.	3.	Occupation	Medical student	
training individually by co-authors F. Elsner and P. Piret	4.	Gender	Female	Methods: Interviewer (p. 5)
Relationship with participants 6. Relationship established 7. Participant knowledge of the interviewer interviewer's occupation and her supporting institution, the German-Chinese Society of Medicine. 8. Interviewer characteristics 9. Interviewer characteristics 10. Vos special relationship. Contact about time, place and issue before the interviewe mostly carried out via E-Mail or messenger application. 9. Participants knew the goals of the study and the interviewer's desire to publish. They also knew the interviewer (p. 6) 9. Methods: Participants' knowledge of the interviewer (p. 6) 10. Methods: Methods: Interviewer (p. 5) 10. Methods: Participants' knowledge of the interviewer (p. 6) 11. Vos carried out via E-Mail or messenger application. 12. Participants characteristics her the study and the interviewer's occupation and her supporting institution, the German-Chinese Society of Medicine. 13. Vos carried out via E-Mail or messenger application. 14. Vos carried out via E-Mail or messenger application. 15. Vos carried out via E-Mail or messenger application. 16. Vos carried out via E-Mail or messenger application. 17. Participants knew the goals of the interviewer's desire to publish. They also knew the interviewer's occupation and her supporting institution, the German-Chinese Society of Medicine. 18. Vos carried out via E-Mail or messenger application. 19. Vos carried out via E-Mail or messenger application. 19. Vos carried out via E-Mail or messenger application. 19. Vos carried out via E-Mail or messenger application	5.	Experience and	The interviewer was trained	Methods: Interviewer
6. Relationship established No special relationship. Contact about time, place and issue before the interviews was mostly carried out via E-Mail or messenger application. 7. Participant knowledge of the interviewer interviewer's desire to publish. They also knew the interviewer's occupation and her supporting institution, the German-Chinese Society of Medicine. 8. Interviewer Characteristics The interviewer expected PC education structure in China to be low due to her previous work on a systematic review. She also expected difficulties in terms of sampling, language barrier and cultural barriers. No other expectations, to her best knowledge.		training		(p. 5)
established Contact about time, place and issue before the interviews was mostly carried out via E-Mail or messenger application. 7. Participant knowledge of the interviewer Enterviewer Participants knew the goals of the study and the interviewer's desire to publish. They also knew the interviewer's occupation and her supporting institution, the German-Chinese Society of Medicine. 8. Interviewer characteristics Interviewer characteristics The interviewer expected PC education structure in China to be low due to her previous work on a systematic review. She also expected difficulties in terms of sampling, language barrier and cultural barriers. No other expectations, to her best knowledge.	Relationsh	ip with participants		
7. Participant knowledge of the interviewer interviewer's desire to publish. They also knew the interviewer (p. 6) 8. Interviewer characteristics 9. Participants knew the goals of the study and the publish. They also knew the interviewer (p. 6) 1. Interviewer coccupation and her supporting institution, the German-Chinese Society of Medicine. 8. Interviewer characteristics 1. Interviewer characteristics 1. Interviewer characteristics 2. Interviewer characteristics 3. Interviewer characteristics 4. Interviewer characteristics 5. Interviewer characteristics 6. Interviewer characteristics 6. Interviewer characteristics 6. Interviewer characteristics 8. Interviewer characteristics 6. Interviewer characteristics 6. Interviewer characteristics 8. Interviewer characteristics 8. Interviewer characteristics 6. Interviewer characteristics 8. Interviewer characteristics 9. Methods: 9. Methods: 9. Methods: 9. Methods: 9. Onterviewer (p. 6) 1. Interviewer (p. 6) 1. Interviewer characteristics	6.		Contact about time, place and issue before the interviews was mostly carried out via E-Mail or	
knowledge of the interviewer s desire to publish. They also knew the interviewer's occupation and her supporting institution, the German-Chinese Society of Medicine. 8. Interviewer characteristics The interviewer expected PC education structure in China to be low due to her previous work on a systematic review. She also expected difficulties in terms of sampling, language barrier and cultural barriers. No other expectations, to her best knowledge.	7	Participant		Methods:
characteristics education structure in China to be low due to her previous work on a systematic review. She also expected difficulties in terms of sampling, language barrier and cultural barriers. No other expectations, to her best knowledge.		knowledge of the interviewer	of the study and the interviewer's desire to publish. They also knew the interviewer's occupation and her supporting institution, the German-Chinese Society of Medicine.	Participants' knowledge of the interviewer (p. 6)
	8.		education structure in China to be low due to her previous work on a systematic review. She also expected difficulties in terms of sampling, language barrier and cultural barriers. No other expectations, to her	
	Domain 2:	study design	best knowledge.	
	Theoretical framework			

9.	Methodological orientation and	Thematic analysis	Methods: Data analysis, paragraph 1
	Theory		(p. 7)
Participar	nt selection		
10.	Sampling	Convenience and snowball sampling	Methods: Sample, paragraph 2 (p. 5)
11.	Method of approach	First approach: mostly by one of the co-authors, or members of the German Chinese Society of Medicine, then contact between interviewer and possible participant via e-mail, telephone or a messenger application. Sometimes direct first face-to-face contact between interviewer and participant.	Methods: Sample, paragraph 2 (p. 5)
12.	Sample size	n=28	Results, paragraph 1 (p. 8)
13.	Non-participation	n=2	Results, paragraph 1 (p. 8)
Setting			
14.	Setting of data collection	In clinics: offices, meeting rooms, classrooms In hotels: lobbies In one restaurant	Methods: Interview settings (p. 6)
15.	Presence of non- participants	Often	Methods: Interview settings (p. 6)
16.	Description of sample	Characteristics of participants	Table 1 (p. 9)
Data colle	ection		
17.	Interview guide	Interview guideline attached in separate file. No pilot testing.	Attached File 1: First and final version of interview schedule, Methods: Interview schedule (p. 4)
18.	Repeat interviews	None	Methods: Paragraph 1 (p. 4)
19.	Audio/visual recording	Audio recording	Methods: Data analysis, paragraph 2 (p. 7)
20.	Field Notes	Done	Methods: Field Notes (p. 4)
21.	Duration	10-50 Minutes	Methods: Interview settings (p. 6)
22.	Data saturation	According to the concept of information power: enough interviews for valid results	Discussion: Information power (p. 18)

23.	Transcripts returned	None	Methods: Data analysis, paragraph 4 (p. 8)
Domain 3:	Analysis and findings		
Data analy			
24.	Number of data coders	1	Methods: Data analysis, paragraph 4 (p. 8)
25.	Description of the coding tree	Figure 1	Figure 1
26.	Derivation of themes	Derived from data	Results, paragraph 3, (p. 8)
27.	Software	No software used	Methods: Data analysis, paragraph 2 (p. 7)
28.	Participant checking	None	Methods: Data analysis, paragraph 4 (p. 8)
Reporting			
29.	Quotations presented	Yes	Results: Theme 1, Theme 2, Theme 3 (p. 10-15)
30.	Data and findings consistent	Yes	Results: Theme 1, Theme 2, Theme 3 (p. 10-15)
31.	Clarity of major themes	Yes	Results: Theme 1, Theme 2, Theme 3 (p. 10-15); Table 2 and Table 3 (p. 27-30)
32.	Clarity of minor themes	Diversity of participants' attitudes included in the themes	Results, paragraph 4 (p. 8)
