

Supplemental Figure 2. EBI dataset TE class and superfamily contribution and enrichment by clade. (A) The percentage of TE classes and superfamilies observed for the fish, birds, and mammals TE models that comprise the total imported EBI TE models. (B) The ratio of the TE percentage taken from (A) divided by the percent of each of the clades' total family contribution to the EBI dataset. Any TE category above 1 (red line) is enriched for that TE type, while any TE category below 1 is depleted for that TE type.
