3 ¹Measured (host phenotypic) or latent variables used in the analysis.

4 ²Number of host genomic features identified as significant for the total effect ($G \rightarrow P$, models
5 M1 or M1L). *P-val* reports the number of features showing *P*-value smaller than 0.05 for the
6 Gamma effect. *Boot* reports the number of features resulting significant after bootstrapping.

7 ³Gut microbial feature used as mediator for the estimation of the indirect effect ($G \rightarrow M \rightarrow P$,
8 models M4 or M4L).

9 ⁴Number of host genomic features identified as significant for the indirect effect ($G \rightarrow M \rightarrow P$,
10 models M4 or M4L). *Mediation* reports the number of features showing a mediated effect larger
11 than the direct effect. Moving to the right, the columns report the number of features in
12 *Mediation* that were also significant for: Sobel test, Bootstrapping test, Permutation test,
13 Bootstrapping and Permutation tests, all tests.

14

15

16 **Table S2:** Comparison of host genomic features found significantly affecting latent vs measured
17 variables for the total effect (G → P, models M1 or M1L). The table reports the number of host
18 genomic features identified as affecting latent variables which were also found affecting
19 measured variables.

20

Latent variable ¹	Measured variable ²	Total ³
FATg	BF1	126
	BF2	249
	BF3	119
	None ⁶	203
FATt	BF4	202
	BFt	216
	BEL	44
	None ⁶	77

21 ¹Latent variables (host phenotypic) used in the analysis. FATg: subcutaneous backfat deposition
22 from 118 to 174 days of life. FATf: backfat and belly deposition at slaughter (197 days).

23 ²Measured variable (host phenotypic) used in the analysis. BF1, BF2, BF3 and BF4: measures of
24 subcutaneous fat depth taken *in vivo* at the age of 118.1±1.16 d; 145.9±1.53 d, 174.3±1.43 d and
25 196.6±8.03 d, respectively. BFt: measure of subcutaneous fat depth taken *post mortem*. BEL:
26 weight of belly cut taken *post mortem*.

27 ³Number of host genomic features identified for the total effect (G → P, models M1 or M1L).

28

29

30 **Table S3:** Comparison of host genomic features found significantly affecting latent vs measured
 31 variables for the indirect effect ($G \rightarrow M \rightarrow P$, models M4 or M4L). The table reports the number
 32 of host genomic features identified as affecting latent variables which were also found affecting
 33 measured variables.

34

Latent variable ¹	OTU ²	Measured variable ³	Indirect ⁴
FATg	S2a	BF1	0
		BF2	0
		BF3	0
		None ⁵	0

35 ¹Latent variables (host phenotypic) used in the analysis. FATg: subcutaneous backfat deposition
 36 from 118 to 174 days of life. FATf: backfat and belly deposition at slaughter (197 days).

37 ²Gut microbial feature used as mediator for the estimation of the indirect effect ($G \rightarrow M \rightarrow P$,
 38 models M4 or M4L).

39 ³Measured variable (host phenotypic) used in the analysis. BF1, BF2, BF3 and BF4: measures of
 40 subcutaneous fat depth taken *in vivo* at the age of 118.1 ± 1.16 d; 145.9 ± 1.53 d, 174.3 ± 1.43 d and
 41 196.6 ± 8.03 d, respectively. BFt: measure of subcutaneous fat depth taken *post mortem*. BEL:
 42 weight of belly cut taken *post mortem*.

43 ⁴Number of host genomic features identified for the indirect effect ($G \rightarrow M \rightarrow P$).

44 ⁵Indicates the number of host genomic features that were not identified using the measured
45 variables.

46

47

48 **Table S4:** Top 15 host genomic regions with significant mediated or total effect on the latent
 49 variables. Effects on FATg were mediated by S2b (*Peptococcus*) and effects on FATt were
 50 mediated by S3c (*Butyricicoccus*).
 51
