## **Reporting Summary**

Nature Research wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Research policies, see our Editorial Policies and the Editorial Policy Checklist.

1016	an statistical analyses, commit that the following items are present in the figure regend, table regend, main text, or methods section.
n/a	Confirmed
	The exact sample size (n) for each experimental group/condition, given as a discrete number and unit of measurement
x	A statement on whether measurements were taken from distinct samples or whether the same sample was measured repeatedly
	The statistical test(s) used AND whether they are one- or two-sided Only common tests should be described solely by name; describe more complex techniques in the Methods section.
x	A description of all covariates tested
	🗶 A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons
	A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient) AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals)
	For null hypothesis testing, the test statistic (e.g. <i>F</i> , <i>t</i> , <i>r</i> ) with confidence intervals, effect sizes, degrees of freedom and <i>P</i> value noted <i>Give P values as exact values whenever suitable.</i>
x	For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings
X	For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes
x	Estimates of effect sizes (e.g. Cohen's <i>d</i> , Pearson's <i>r</i> ), indicating how they were calculated
	Our web collection on statistics for biologists contains articles on many of the points above

## Software and code

Policy information about availability of computer code

Data collection

RNA-seq process: Trimmomatic (0.35); TopHat (2.1.0); Cufflinks (2.2.1); HTSeq (2.7); DEseq2 (1.20) DNA methylation data analysis: BSMAP (2.90); Metilene (0.2-7); DAVID (6.8); Enrichr (online tool)

ChIP-seq data analysis: Bowtie2 (2.2.7); MACS (2.1.0)

R packages: bcv (1.0.1) Python packages: pytorch (1.2)

Data analysis

Analysis related to CHALM calculation and gene expression prediction by deep learning are conducted with custom developed tools, which are available at: https://github.com/JianfengXu93/CHALM;

DMR calling tool: Metilene (0.2-7);

Pathway enrichment analysis are conducted with DAVID (6.8) and Enrichr (online tool);

All other custom codes related to this work are available upon request.

For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors and reviewers. We strongly encourage code deposition in a community repository (e.g. GitHub). See the Nature Research guidelines for submitting code & software for further information.

## Data

Policy information about <u>availability of data</u>

 $All\ manuscripts\ must\ include\ a\ \underline{data\ availability\ statement}.\ This\ statement\ should\ provide\ the\ following\ information,\ where\ applicable:$ 

- Accession codes, unique identifiers, or web links for publicly available datasets
- A list of figures that have associated raw data
- A description of any restrictions on data availability

Public datasets from GEO and Roadmap project are used in this study. Accession number and links to all related datasets can be found in the method section. Processed DNA methylated data (differentially methylated CGIs or de novo DMRs) are provided in supplementary datasets. Other processed data will be provided upon request.

Field-specific reporting
Please select the one below that is the best fit for your research. If you are not sure, read the appropriate sections before making your selection.
🗶 Life sciences 🔲 Behavioural & social sciences 🔲 Ecological, evolutionary & environmental sciences
For a reference copy of the document with all sections, see <a href="mailto:nature.com/documents/nr-reporting-summary-flat.pdf">nature.com/documents/nr-reporting-summary-flat.pdf</a>
Life sciences study design
All studies must disclose on these points even when the disclosure is negative.
Sample size Since only public datasets are used for this work, we did not perform sample size calculations. The sample sizes is determined by the data availability.
Data exclusions For the RNA-seq data of TCGA-LUAD, only 79 samples are randomly selected to matched the sample size of the SCLC RNA-seq dataset (GSE60052).
Replication All results have been repeated for at least two times in different datasets if multiple datasets are available. Results are consistent between repeated analyses.
Randomization Samples are selected randomly if the whole dataset is not used.
Blinding Since only public datasets are used for this work, this is not applicable.
Reporting for specific materials, systems and methods
We require information from authors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each mater system or method listed is relevant to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response
Materials & experimental systems Methods
n/a   Involved in the study
Antibodies  K   ChIP-seq
Eukaryotic cell lines    X   Flow cytometry   Palaeontology and archaeology   MRI-based neuroimaging
raiaeontology and archaeology
Human research participants
Clinical data
Dual use research of concern
