**Supplementary Table 7:** Linear regression results from models exploring interactions between victimisation and depression in predicting wellbeing aged 23 years.

	Wellbeing		
	Estimate	SE	P value
<b>Main and interactive effects <sup>a</sup></b>			
Depression	-5.77	1.10	<0.001
Occasional victimisation	-0.80	0.42	<0.05
Frequent victimisation	-2.17	0.56	<0.001
Occasional victimisation*Depression	0.79	1.59	0.62
Frequent victimisation*Depression	-0.74	1.71	0.67

Note:

<sup>a</sup> This model explored the main and interactive effects of depression and victimisation (N=2268).
