

S13 Fig. *TM4SF4* knockdown in lung adenocarcinoma cell lines reduces cell growth. A549 cells were treated with siTM4SF4. (A) Growth curve shows the effect of targeting *TM4SF4* in A549 cells. (B, C) *TM4SF4* knockdown was confirmed by quantitative reverse transcription–polymerase chain reaction and fluorescence-activated cell sorting analysis. (D, E) A549 cells transfected with siTM4SF4 showed an increase in the G1 population and a decrease in G1/S checkpoint protein levels. (F) Data quantification of panel (E).
