

Supplementary Figure S4

Supplementary Figure S4. Therapeutic activity of differential doses of hFlagrp170-encoding adenovirus. C3H/HeN mice (n=5) bearing SCCVII tumors (4~5 mm in diameter) were treated *i.t.* with an empty adenovirus (i.e., null) or an adenovirus encoding Flagrp170 at the indicated viral doses (p.f.u.) for a total of five treatments. Tumor growth (**A**) and animal survival (**B**) were followed. ALT levels in the serum (**C**) and body weight (**D**) of treated mice were examined for potential adverse effects. Data shown are representative of three independent experiments. *, $p < 0.05$, NS, not significant, using two-way repeated measures ANOVA test (A), Log-rank test (B) and student t-test (D).
