

Supplementary Figure S10**Supplementary Figure S10. Viral infection results in cytosolic expression of Flagrp170.**

Following infection of bone marrow-derived dendritic cells with the Flagrp170-encoding adenovirus, Flagrp170 expression in whole cell lysate (WCL), the Triton X-100-soluble (plasma membrane, PM), and Triton X-insoluble (cytosol) fractions was analyzed by immunoblotting. Na⁺/K⁺ ATPase and GAPDH were used as markers for the membrane or cytosol fraction, respectively.
