

**Supplementary Table 1.** Postoperative Intraretinal Fluid Cysts and Anterior Chamber Cell Following Cataract Surgery by History of Uveitis in the Operative Eye. Approximately a quarter of eyes undergoing cataract surgery demonstrated evidence of postoperative cystoid macular edema, with no association apparent based on history of uveitis.

	Non-uveitic (N=19 eyes)	Uveitic (N=15 eyes)	Uveitic vs Non-uveitic <i>p</i> -value
<b>Postoperative intraretinal fluid cysts</b>			
N (%)	4 (21.1%)	4 (26.7%)	0.9
<b>Anterior Chamber Cells ≥ Grade 1 (6-15 cells)</b>			
Month 1	10 (52.6%)	10 (66.7%)	
Month 3	6 (31.6%)	7 (46.7%)	
Month 6	5 (27.8%)	1 (7.7%)	0.428
Month 9	4 (22.2%)	3 (23.1%)	
Month 12	0 (0%)	0 (0%)
