

SUPPLEMENTAL FIGURE

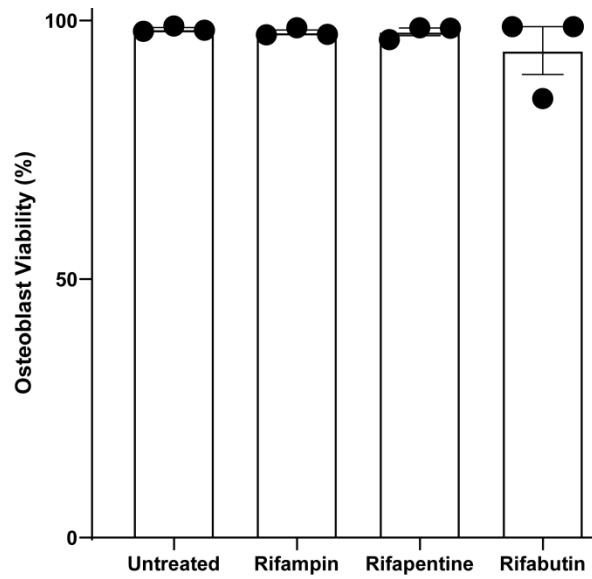

FIGURE S1. MC-3T3-E1 viability after 24 hour rifamycin treatment. Viability of MC-3T3-E1 osteoblasts left untreated for 24 hours, or treated with 16 $\mu\text{g/ml}$ rifampin, rifapentine, or rifabutin for 24 hours. Cells were harvested, stained with Ghost Red 780 Viability Dye, and analyzed via flow cytometry. Data depicted as the mean + standard error of the mean for $n=3$ flow cytometry experiments.
