

Supplementary Information

Fig. S1 Cleaning of sequencing reads before *de novo* transcriptome assembly. **a** Percentage of reads mapping the *Dokdonia* MED134 genome. **b** Percentage of reads mapping the operon of *C. burkhardae* (after excluding *Dokdonia* reads).

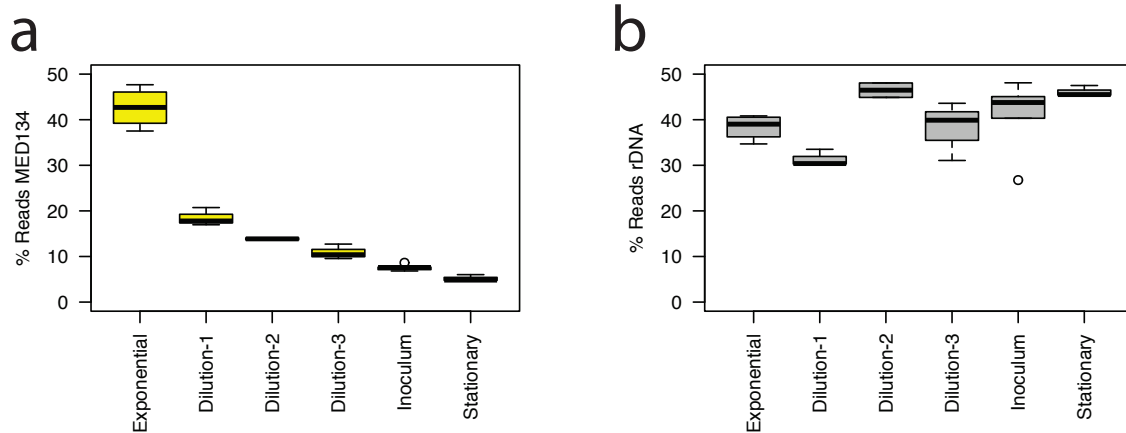

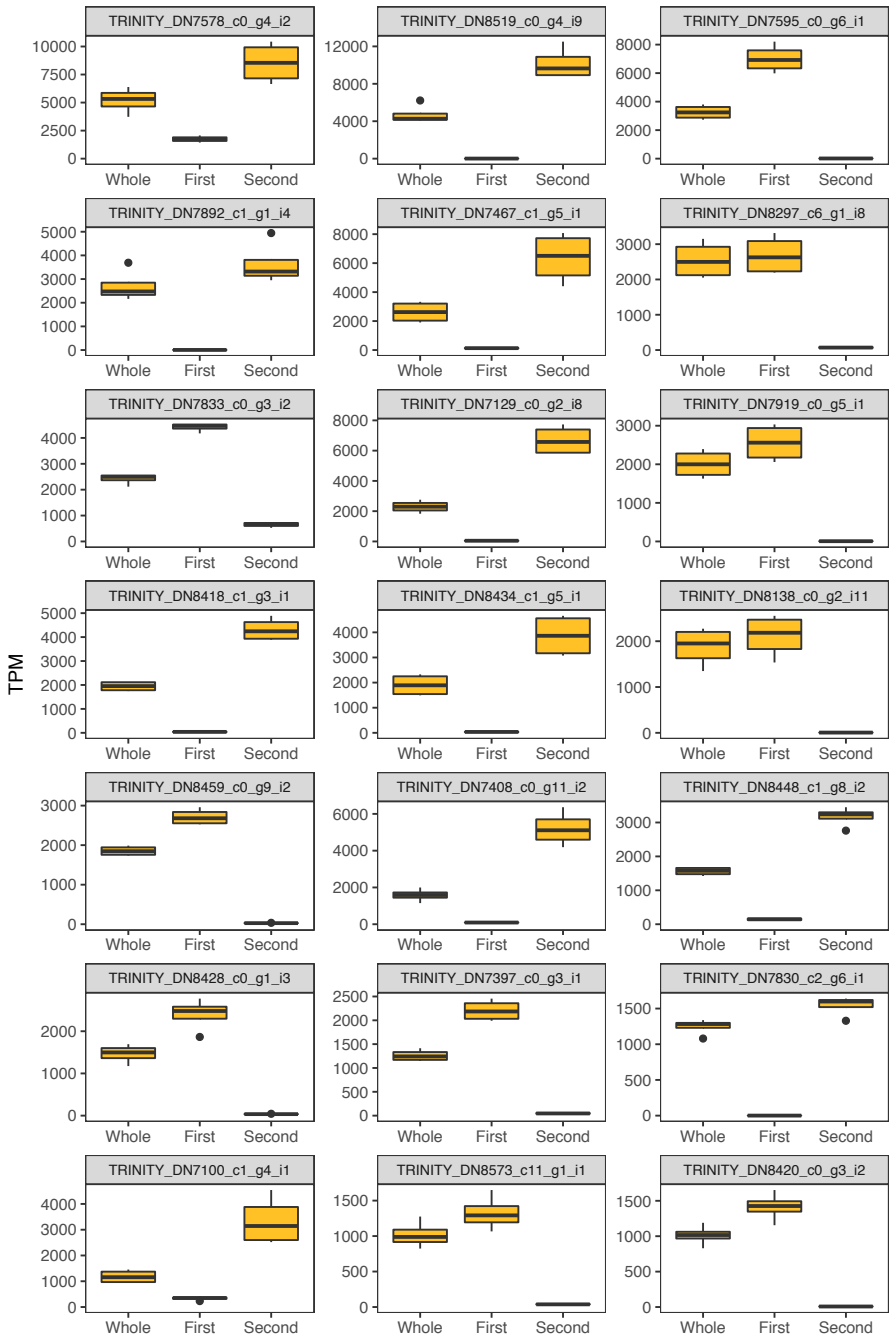

Fig. S2 Expression level of selected transcripts before and after being split in 2-4 fragments based on the presence of ORFs with different functional predictions. The list shows highly expressed transcripts in the Exponential phase (average TPM >500 before splitting).

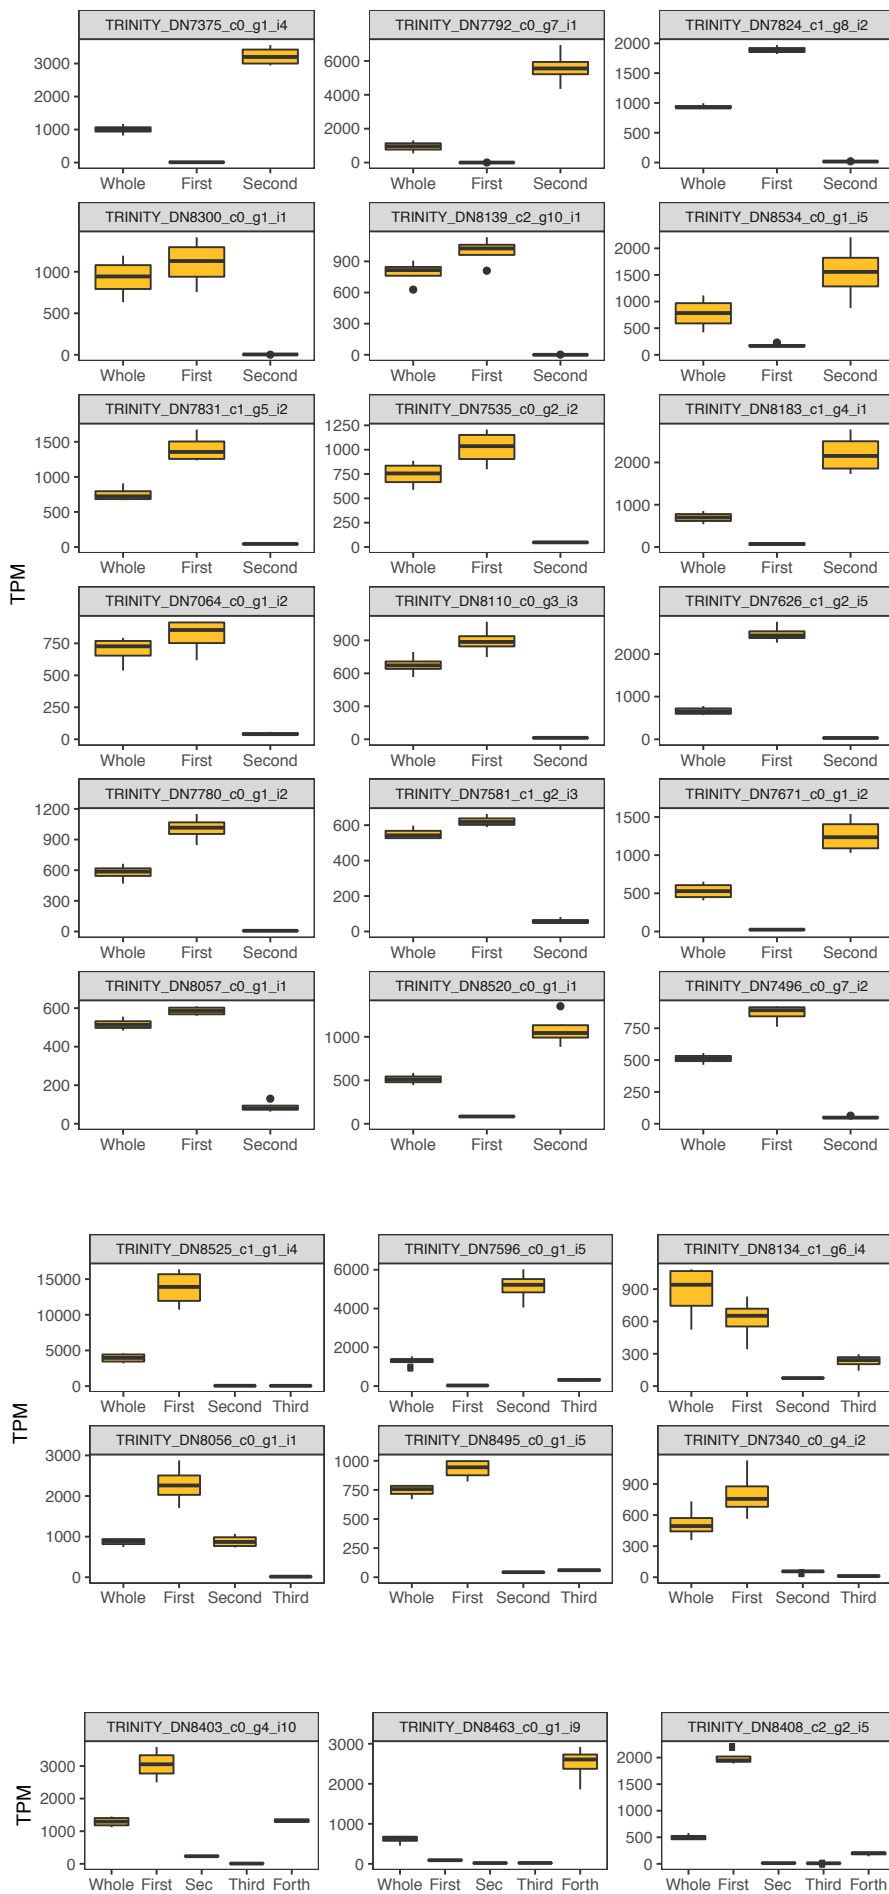

Fig. S3 Fragment recruitment analysis done with metagenomes from the Malaspina expedition and the *C. burkhardae* genome as reference. Data is separated in the three water column regions, epipelagic (20 metagenomes), mesopelagic (26), and bathypelagic (20).

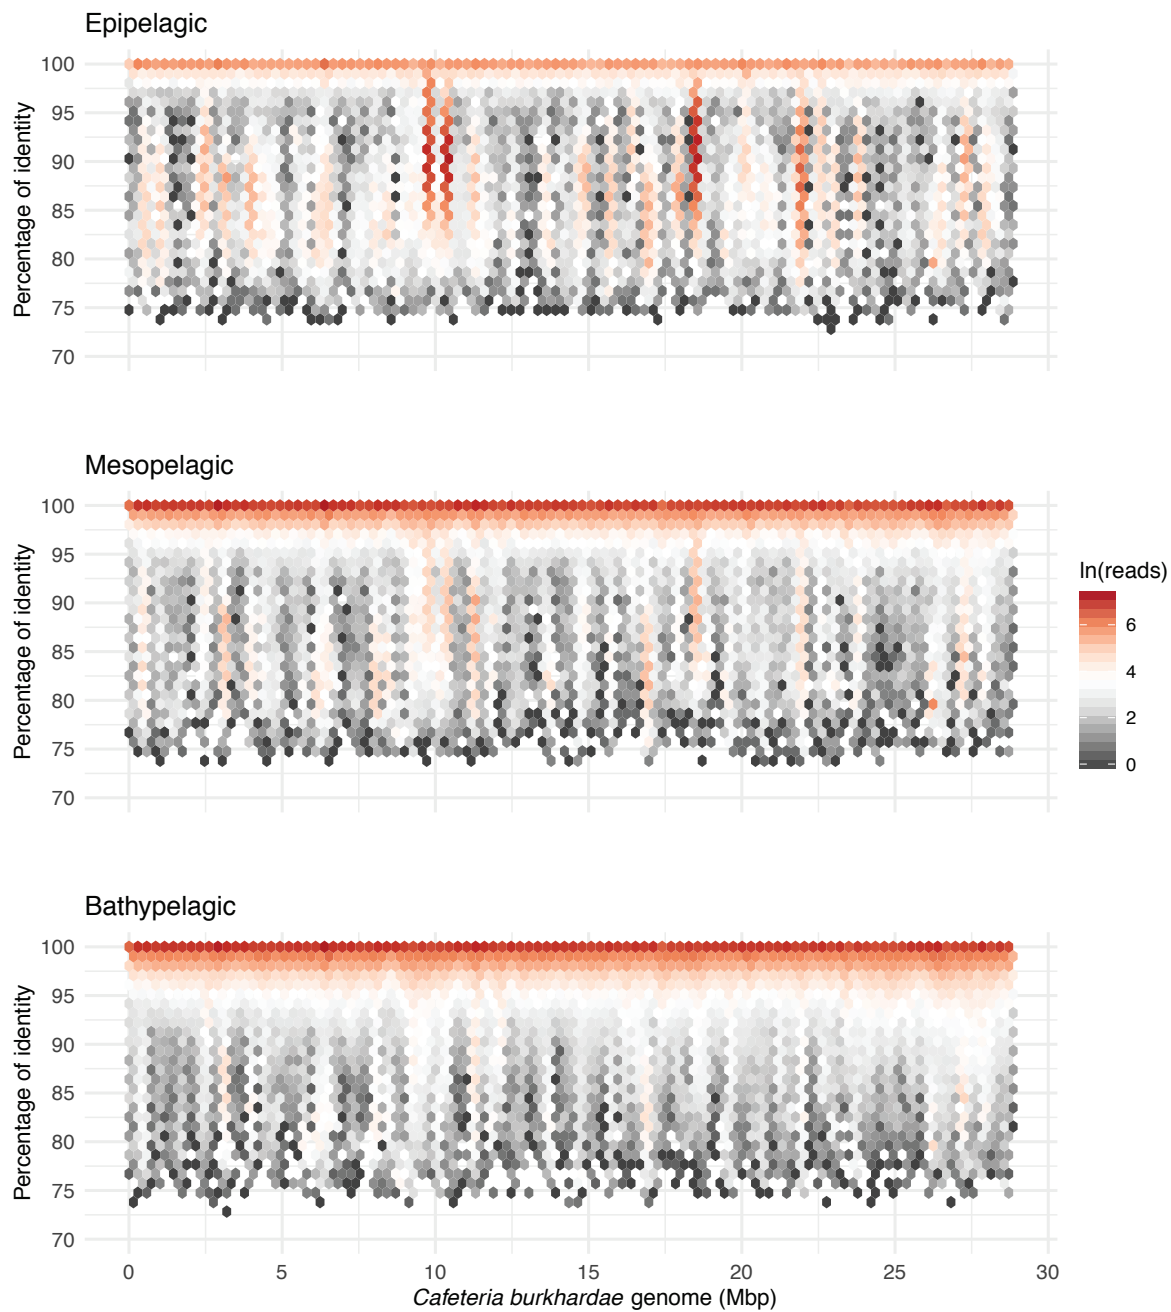

Fig. S4 Comparison of the expression profiles of all samples in the five main states plus the Inoculum, and the MMETSP transcriptome. **a** NMDS plot placing samples in a two dimensional space based on TPM values of all genes. **b** Heatmap showing Pearson correlation coefficients in sample pairwise comparisons based on differently expressed genes.

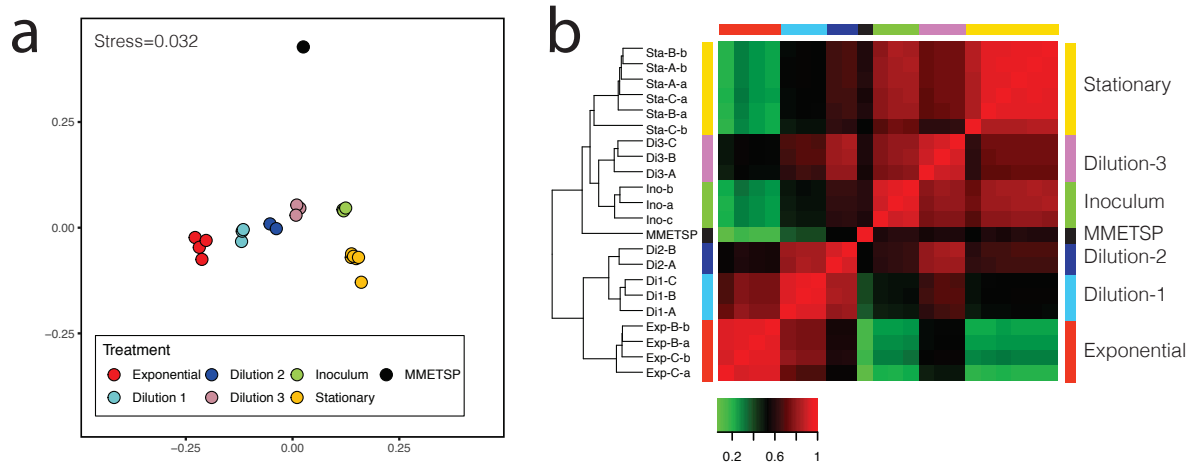

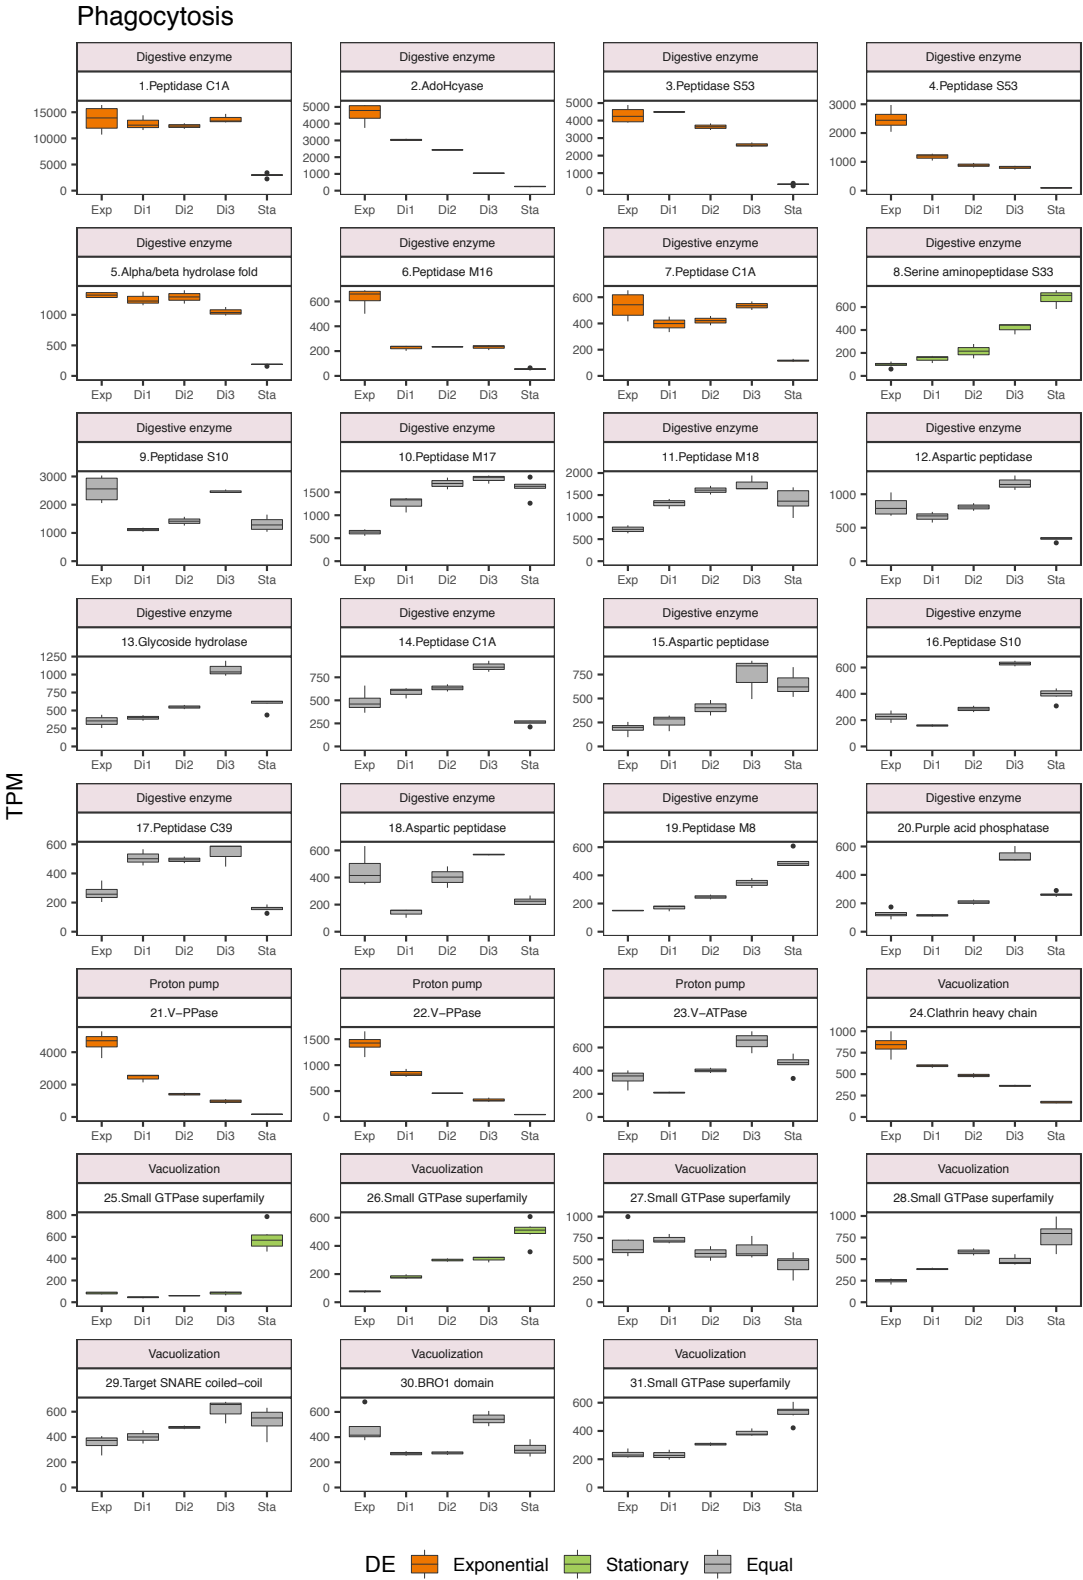

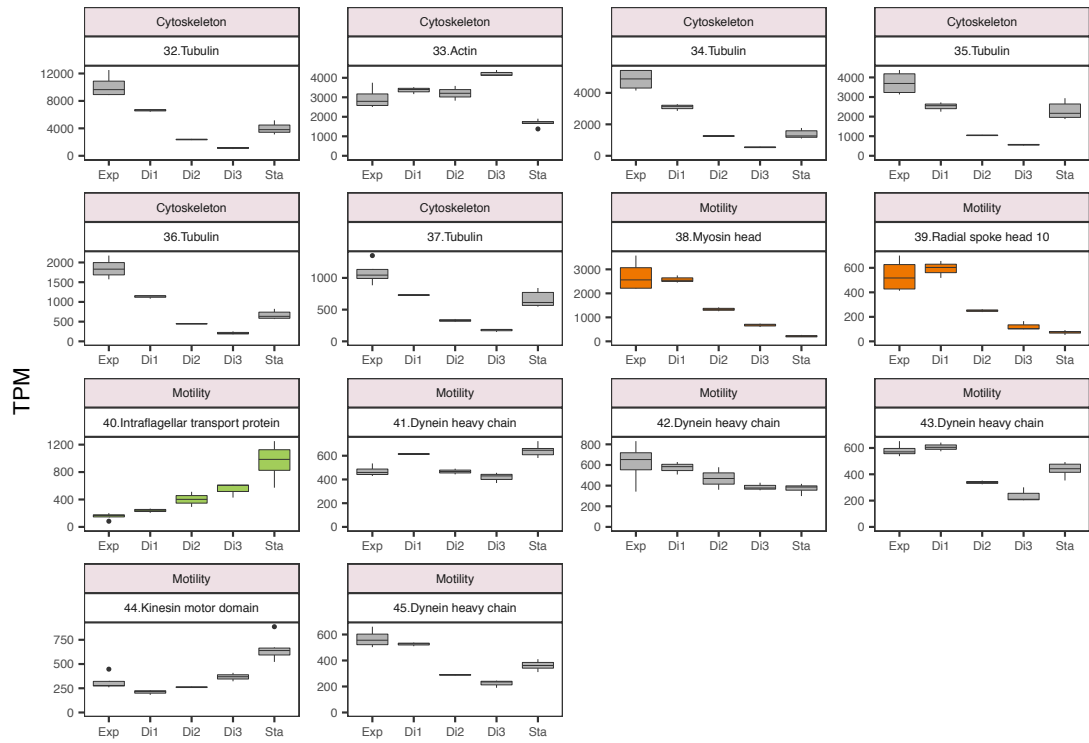

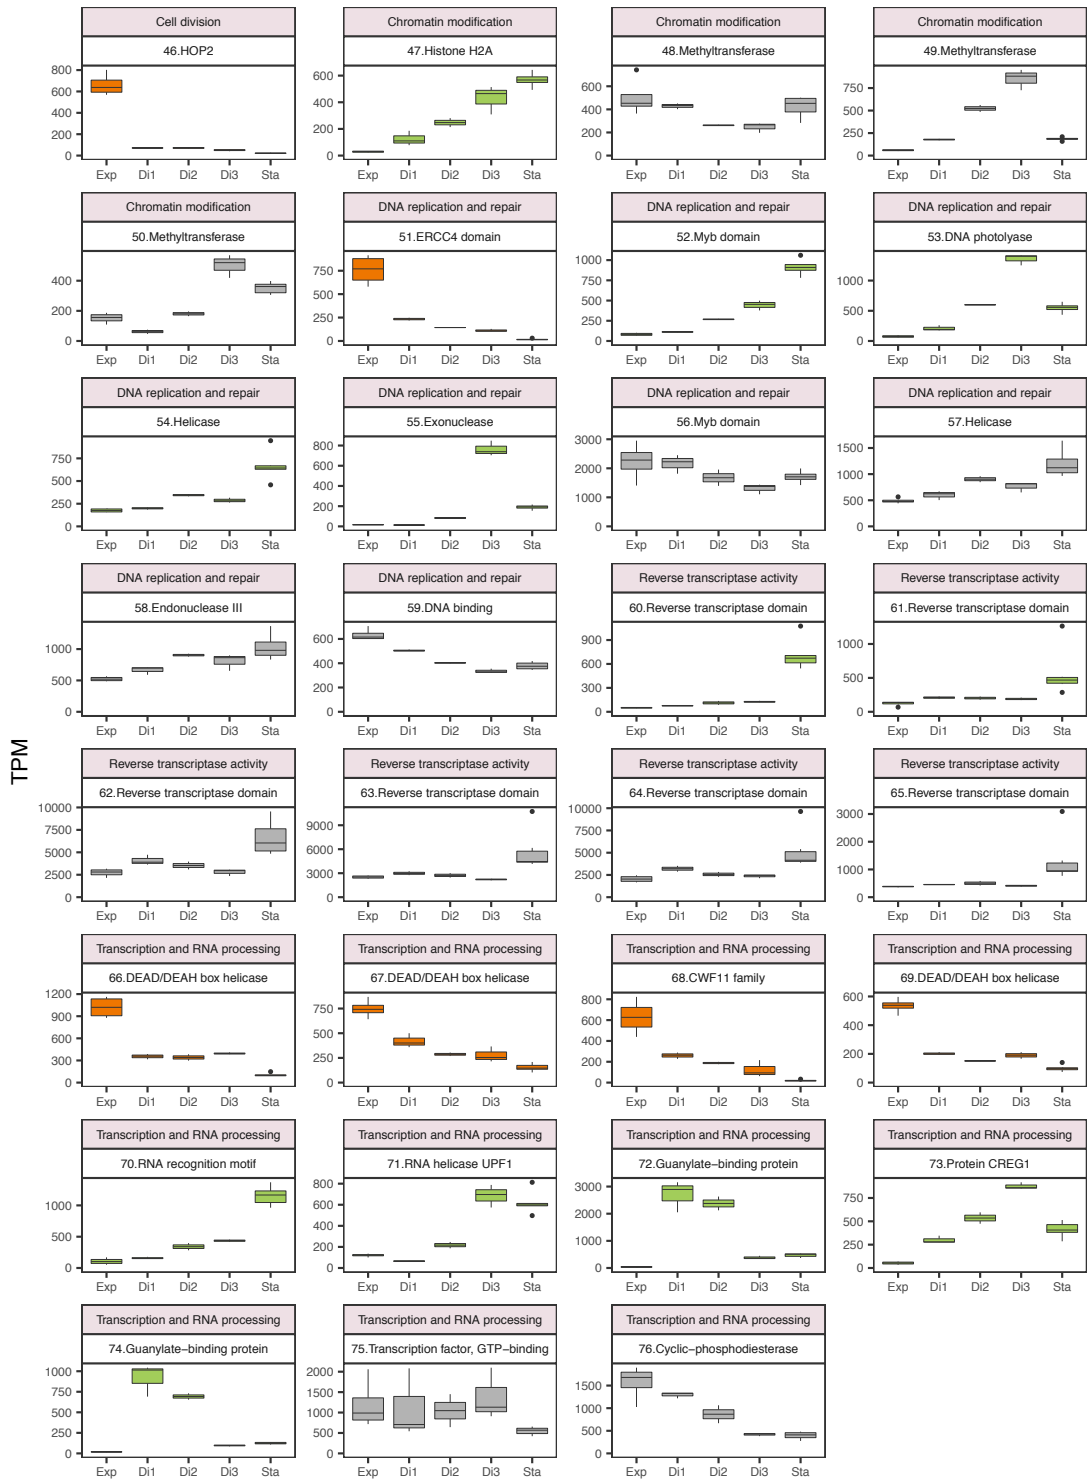

Fig. S5 Box plots displaying expression changes in the five states of the 432 highly expressed genes, ordered based on their general process and cellular function and then by differential expression between Exponential and Stationary. Orange: genes upregulated in Exponential; Green; genes upregulated in Stationary; Grey: genes equally expressed.

Table S3 Growth properties of *C. burkhardae* growing on *Dokdonia* MED134 in the three batch cultures established.

	Bottle A	Bottle B	Bottle C
Growth rate (h ⁻¹)	0.164	0.152	0.154
Doubling time (h)	4.2	4.6	4.5
Maximal abundance (10 ⁴ cells ml ⁻¹)	7.5	8.6	8.1
Grazing rate (bacteria flagellate ⁻¹ h ⁻¹)	49.3	41.6	40.4
Growth Efficiency (%)	35.9	39.5	41.1
Decay rate in stationary (h ⁻¹)	0.005	0.006	0.005
Half-time decay in stationary (h)	140.4	120.7	129.5

Table S4 Number of differentially expressed genes in pairwise comparisons among the five phases. Each line indicates the number of upregulated genes of the phase labeled per line (against the phase labeled per columns).

		<i>as compared with</i>				
		<i>Exponential</i>	<i>Dilution 1</i>	<i>Dilution 2</i>	<i>Dilution 3</i>	<i>Stationary</i>
Upregulated in	Exponential	-	43	235	547	1231
	Dilution 1	195	-	34	366	785
	Dilution 2	368	34	-	50	289
	Dilution 3	445	118	18	-	224
	Stationary	825	419	182	245	-
