Appendix 1. Summary of significant effects of land-use parameters and abiotic factors in forests (forest management index Formi, proportion of non-native tress, proportion of dead wood with saw cuts, proportion of wood harvested, pH and soil moisture) and grasslands (land-use index LUI, mowing, grazing, fertilization, pH and soil moisture) on the community weighted mean of the maximum shell size, the number of offspring, light preference, humidity preference, drought resistance and inundation tolerance. * p < 0.05, ** p < 0.01, *** p < 0.001. \downarrow negative effect. \uparrow positive effect.

Community weigthed	l mean of:	Swabian Alb	Hainich	Schorfheide	Community weigthe	d mean of:	Swabian Alb	Hainich	Schorfheide
Maximum shell size	Formi		^***	↓***	Maximum shell size	LUI			↓***
