

**Supplemental Table 3.** Model and test characteristics using  $\geq 9.0\%$  threshold to denote high risk patients, comparing baseline and intraoperative models for postoperative acute kidney injury in intraabdominal surgery patients.

	Baseline Model		Intraoperative Model		$\Delta^{\dagger}$	P-Value <sup>†</sup>
	Value	95% CI	Value	95% CI		
Sensitivity	71	(65, 76)	74	(69, 80)	3.8	0.2
Specificity	69	(67, 70)	74	(73, 76)	5.9	<0.0001
PPV	18	(15, 20)	22	(19, 25)		
NPV	96	(95, 97)	97	(96, 98)		

PPV, positive predictive value; NPV, negative predictive value.

<sup>†</sup>Sensitivity and specificity between models compared using paired t-test.
