

Figure S1. Cytotoxic activity of BCMA-CAR and Mock transduced iNKT cells against CD1d⁺ primary MM cells. **(a)** Density plot depicting the expression of CD1d and CD138, upper right quadrant represent the plasma cells. **(b)** Graph demonstrates lysis the of CD38⁺CD138⁺ MM cells by BCMA-BBz CAR iNKT cells or Mock transduced iNKT cells after 16 hour co-incubation. Note the high levels of lysis by Mock transduced iNKT cells at high E:T ratios, which is probably mediated via the endogenous TCR.
