Supplementary Fig. 1. Relative Risk Ratios (RRRs) and 95% Confidence Intervals (CIs) for Triple-Negative Breast Cancer by Neighborhood Socioeconomic Status (nSES) and Personal Education Level. nSES scores were categorized into tertiles. Model adjusted for age at diagnosis, household poverty level, health insurance, menopausal status, parity/age at first birth/lactation, BMI 1 year prior to diagnosis, and census tract-level proportion of Black residents.

	RRR	[95% CI]
Highest nSES	1	[Reference]
	1.26	[0.70-2.25]
Middle nSES	1.47	[0.74-2.89]
	2.53	[1.46-4.37]
Lowest nSES	1.39	[0.64-3.03]
	2.75	[1.56-4.85]
