Assessing Patterns of Palliative Care Referral and Location of Death in Patients with Idiopathic Pulmonary Fibrosis: A 16-Year Single-Center Retrospective Cohort Study

Richard H. Zou, MD, Mehdi Nouraie, MD, PhD, Xiaoping Chen, MS, Melissa I. Saul, MS,
Naftali Kaminski, MD, Kevin F. Gibson, MD, Daniel J. Kass, MD,
Kathleen O. Lindell, PhD, RN

	All	No PC		PC		P Value
	Results	n	Results	n	Results	
Death (n, %)	559 (86%)	574	489 (85%)	74	70 (95%)	0.027
Death:		315		61		0.009
Hospital (n, %)	211 (56%)		186 (59%)		25 (41%)	
Home or Hospice (n, %)	165 (44%)		129 (41%)		36 (59%)	
Death: Academic ICU (n, %)	107 (51%)	186	94 (51%)	25	13 (52%)	0.89

s-Table 1. Location of Death (2000 to 2012). PC referral recipients had less in-hospital death. Values are documented as median or percentages (IQR), except when marked *, indicating mean (SD). PC=palliative care. ICU=intensive care unit.

	All	No PC		PC		P Value
	Results	n	Results	n	Results	
Death (n, %)	77 (43%)	142	47 (33%)	38	30 (79%)	<0.001
Death:		32		24		0.16
Hospital (n, %)	34 (61%)		22 (69%)		12 (50%)	
Home or Hospice (n, %)	22 (39%)		10 (31%)		12 (50%)	
Death: Academic ICU (n, %)	18 (56%)	21	13 (62%)	11	5 (45%)	0.37

s-Table 2. Location of Death (2013 to 2016). PC referral recipients had lower percentage of in-hospital death. Values are documented as median or percentages (IQR), except when marked *, indicating mean (SD). PC=palliative care. ICU=intensive care unit.

	All	No PC		PC		P Value
	Results	n	Results	n	Results	
Age at Diagnosis (years)	69 (63-75)	566	69 (63-75)	74	71 (65-76)	0.069
Age at Death (years)	74 (67-79)	489	73 (67-79)	70	76 (69-81)	0.015
Male (n, %)	397 (61%)	574	353 (62%)	74	44 (59%)	0.74
White Non-Hispanic (n, %)	631 (97%)	574	559 (97%)	74	72 (97%)	0.96
Smoker (n, %)	437 (68%)	572	392 (69%)	72	45 (63%)	0.36
Tobacco (pack years)*	23.8 (26.9)	538	23.2 (25.6)	71	28.4 (34.6)	0.22
Initial Oxygen Requirement (L)*	1.12 (1.84)	568	1.13 (1.84)	73	1.07 (1.89)	0.79
Initial Oxygen Requirement >0L (n, %)	212 (33%)	568	190 (34%)	73	22 (30%)	0.57
Diagnosis to Initial Visit (days)	285 (0-650)	566	289 (2-679)	74	228 (0-453)	<0.001
Diagnosis to Death (days)	1281 (668-2067)	488	1257 (659-2007)	70	1539 (805-2339)	0.13
Distance from Center (miles)	52 (16-112)	572	59 (20-120)	73	15 (10-33)	<0.001
Number of Center Visits	4 (2-8)	574	3 (2-8)	73	7 (3-15)	<0.001
Support Group (n, %)	162 (25%)	574	125 (22%)	74	37 (50%)	<0.001
Charlson Index*	0.73 (1.02)	574	0.71 (1.01)	74	0.82 (1.06)	0.40
Charlson Index \geq1, (n, %)	282 (44%)	574	243 (42%)	74	39 (53%)	0.090

s-Table 3. Baseline Patient Demographics (2000 to 2012). PC referral recipients resided closer to the outpatient center and had more follow-up visits. Values are documented as median or percentages (IQR), except when marked *, indicating mean (SD). PC=palliative care.

	All	No PC		PC		P Value
	Results	n	Results	n	Results	
Initial FVC %	64 (51-77)	539	63 (50-76)	71	65 (55-78)	0.17

s-Table 6. Pulmonary Characteristics (2013 to 2016). PC referral recipients had worse initial pulmonary function. Values are documented as median or percentages (IQR), except when marked *, indicating mean (SD). PC=palliative care. FVC=forced vital capacity. DLco=diffusing capacity of lungs for carbon monoxide. GAP=Gender, Age, and Physiology.

s-Figure 1. Kaplan-Meier Survival Curve (2013 to 2016). Mortality estimates for patients who received PC (solid) compared with those who did not receive PC (dashed). PC referral recipients had lower survival ($p=0.034$). PC=palliative care.

s-Figure 2. Kaplan-Meier Survival Curve (2013 to 2016). Mortality estimates for patients who received PC (red) compared to those who did not receive PC (blue), adjusted by baseline FVC% and initial oxygen requirement by adjusted Cox model. There were no survival differences between groups. PC=palliative care.
