

Supplementary Fig 1. Representative axial ultrasound images of dimethylsulfoxide (*DMSO*) and GSK2593074A (*GSK'074*)-treated mice 7 days after aneurysm induction.

Supplementary Fig 2. Internal aortic diameter measured from ultrasound images over the course of the study period. There were no differences in internal diameter between the GSK2593074A (*GSK'074*) and dimethylsulfoxide (*DMSO*)-treated groups. Data are presented as mean \pm standard error. Two-way analysis of variance with a post hoc Tukey's test was performed.
