Supplementary Figure E1. (A) mRNA expression (Ct) of the pore-forming α -1-subunit *KCNMA1* and the auxiliary *KCNMB1*, -2, -3, -4 β -subunits in human pulmonary microvascular endothelial (HULEC5a, n = 6) and human alveolar epithelial cells (HPAEpiC, A549, and H441; n = 4-7).

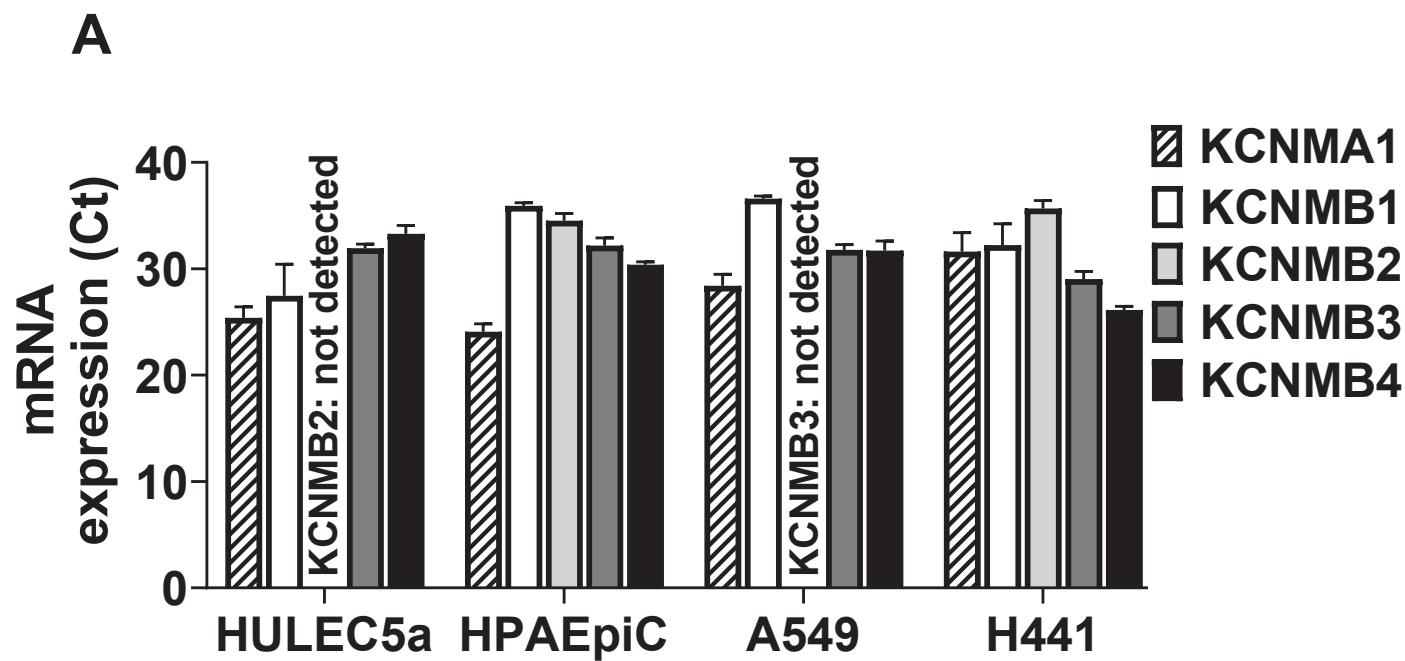

Supplementary Figure E2. Validation of the Em FLIPR assay. Representative recordings (A, C) and summary plots (B, D; n = 3-6, *p \leq 0.05) showing the voltage-dependence of the FLIPR assay as dose-response curves to incremental increases in extracellular K⁺ (K₂SO₄) concentrations (reflective of incremental Em depolarization) in human endothelial Hulec5a (A, B) and epithelial HPAEpiC cells (C, D). Δ IF represents the IF values of each K⁺ curve after subtracting the values for the 0 mM K⁺ control. Black arrows indicate the timing of changes in extracellular K⁺ (K₂SO₄) concentrations.
