

### INNOVATE-UK: International Osteopathy and Evidence-Based Practice Project

#### Welcome

Evidence-based practice (EBP) is described as a problem-solving framework that facilitates the use of the best available evidence to make decisions about the care of individual patients. Although the use of EBP amongst all health professions is encouraged, we do not yet have a good understanding of osteopath's use of EBP. This study serves to address this need.

If you are an osteopath, we invite you to participate in this brief (10-minute) survey to explore osteopath use, opinion, skills and training in EBP, as well as the barriers and enablers of EBP use, in order to better understand the factors that may influence an osteopath's uptake of EBP.

By completing this survey you are consenting to participation in this study; however, your participation is voluntary and you can withdraw from the study at any time. Your participation and/or withdrawal from this study will have no impact on your relationship with the researchers or their affiliated institutions. You also have the right to ask any questions about the study at any time. So please contact Dr Oliver Thomson as per the contact information below if you have any questions or concerns relating to this study.

Please note that all information collected will remain confidential, and that the data obtained will not be used for any other purpose except for this study. Findings from the study may be published in a peer-reviewed journal, disseminated to professional manual therapy associations, and presented at international conferences and research seminars. A summary of the research findings also will be available to participants (upon request) from 1st August 2017. While your responses will be kept confidential by the researchers and not be identified in the reporting of this research, the researcher cannot guarantee the confidentiality or anonymity of material transferred by email or the internet.

This study has been approved by the British School of Osteopathy Research Ethics Committee. Any ethical concerns relating to the conduct of this study can be addressed to the Secretary of the British School of Osteopathy Research Ethics Committee, Dr Mike Ford, on 0207 089 5330 or m.ford@bso.ac.uk.

Sincerely,

Dr Oliver Thomson Senior Lecturer | British School of Osteopathy 275 Borough High Street, London, SE1 1JE Tel: 020 70895330 | Email: o.thomson@bso.ac.uk

Please answer the following questions about your use of evidence-based practice as indicated.

* 38. What percentage of your practice do you estimate is based on clini evidence from clinical trials)?	cal research evidence (i.e.
None (0%)	
Very small proportion (1-25%)	
Small proportion (26-50%)	
Moderate proportion (51-75%)	
Large proportion (76-99%)	
All (100%)	
* 39. When you are making clinical decisions, in what order do the followinformation inform the basis of your decision? (Please rank the items the most frequently used source of information, to 10 being the least funformation)	from 1 to 10, with 1 being
# Published clinical evidence (i.e. clinical trials)	
Published experimental/laboratory evidence (i.e. animal or test tub	e studies)
Traditional knowledge	
Consulting fellow practitioners or experts	
# Personal intuition	
Trial and error	
Clinical practice guidelines	
Patient preference	
Personal preference
