Variable		Odds ratio (95% CI)	P Value
COVID-19 RT-PCR negative		0.41 (0.3 - 0.6)	<0.0001
Age, years		1.06 (1.0 - 1.1)	<0.0001
Sex	Female	0.90 (0.7 - 1.2)	0.446
Co-morbidities	1	1.13 (0.8 - 1.7)	0.552
	2 or more	1.45 (1.0 - 2.1)	0.042
CRP		1.00 (1.0 – 1.0)	<0.0001
Oxygen Saturation <94%		1.41 (1.1 - 1.9)	0.016
Urea		1.04 (1 - 1.1)	<0.0001

Supplementary Table 2. Multivariable logistic regression model assessing association between PCR-status and mortality, adjusting for other variables known to be risk-factors for mortality in 19. Continuous variables modelled as linear. No interactions in the final model. P-vales calculat likelihood ratio tests. N= 1,414.
