

Figure S1. Efficiency of lentiviral transfection was confirmed by the intensity and ratio of green fluorescence. (A) The green fluorescence of HeLa cells transfected with miR-663b NC and miR-663b-KD virus. (B) The green fluorescence of CaSki cells transfected with miR-663b NC and miR-663b-KD virus. Magnification, x100. NC, negative control; KD, knockdown.
