

Supplemental Material

Supplemental Figure 1. cAMP regulates induction of IL-12 p40 and IL-10 by LPS and IL-4. (A) Peritoneal macrophages were stimulated with *E. coli* LPS (10 ng/ml) and rIFN- γ (100U) in the absence or presence of ACT (10 nM) for the indicated time intervals and mRNA was measured by qRT-PCR for IL-12p40. (B) Peritoneal macrophages were stimulated with rIL-4 (40 ng/ml) alone, ACT alone, or rIL-4+ACT for 6 h and mRNA was measured by qRT-PCR.
