

Description of Additional Supplementary Files

File Name: Supplementary Data 1

Description: Supplementary excel file lists the inferred ligand-receptor pairs for each method (CellChat, CellPhoneDB, iTALK and SingleCellSignalR) between any two subpopulations from the four spatially colocalized cell populations in E14.5 embryonic mouse skin. The shared ligand-receptor pairs between CellChat and the other three methods are bolded in each result from the three methods.

File Name: Supplementary Data 2

Description: Supplementary excel file shows the average expressions of all predicted ligands and receptors in each cell subpopulation. Related to Figure 3 and Figure 5.
