

Supplementary Data

SUPPLEMENTARY FIG. S1. Response time by age group.

SUPPLEMENTARY TABLE S1. SENSITIVITY, SPECIFICITY, AND POSITIVE PREDICTIVE VALUE DEFINITIONS

			<i>Nonresponder status at week 8</i>	
			<i>Disease present</i>	<i>Disease absent</i>
			<i>Nonresponder</i>	<i>Responder</i>
No change at given week indicating that nonresponse is likely	Test positive	CGI-I (≥ 4), no symptom improvement	TP	FP
	Test negative	CGI-I (≤ 3), at least minimal improvement	FN	TN

TP, true positives; FP, false positives; FN, false negatives; TN, true negatives. Sensitivity = $TP / (TP + FN)$, Specificity = $TN / (TN + FP)$, positive predictive value = $TP / (TP + FP)$.
