# Supplementary Data

SUPPLEMENTARY FIG. S1.   Response time by age group.

SUPPLEMENTARY TABLE S1. SENSITIVITY, SPECIFICITY, AND POSITIVE PREDICTIVE VALUE DEFINITIONS

			Nonresponder status at week 8	
			Disease present	*Disease absent*
			Nonresponder	*Responder*
No change at given week indicating that	Test positive	CGI-I (≥4), no symptom improvement	TP	FP
nonresponse is likely	Test negative	CGI-I (≤3), at least minimal improvement	FN	TN

TP, true positives; FP, false positives; FN, false negatives; TN, true negatives. Sensitivity = TP/(TP + FN), Specificity = TN/(TN + FP), positive predictive value = TP/(TP + FP).
