

Additional file 5

Additional file 5. *De novo* root regeneration efficiency of different tissues.

Regenerated inflorescence stems (a), vegetative leaves (b), and shooting calli (c) were excised and incubated on RM. Images of *de novo* root regeneration for each tissue (d-f) were taken at the 21 days after incubation on RM (DAR). Arrows indicate *de novo* regenerated roots. Black scale bars = 5 mm; White scale bars = 1 cm.
