

Fig. S8

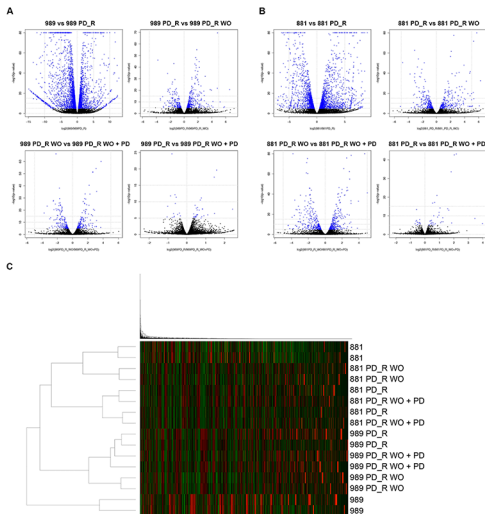

Fig. S8 Transcriptional comparison of post-drug washout cells. A-B. Volcano plot representation of differential expression analysis of genes in parental, drug-resistant, and washout cell lines. Blue points mark the genes with significantly increased or decreased expression respectively compared samples. The log2fold-changes in expression are plotted on the x-axis and the log10p-value of the differential expression is plotted on the y-axis. C. Heat map depicting unsupervised clustering analyzed of transcriptomes of drug resistant cell lines after washout of PD901.
