Supplemental Figure 1. Study flow chart

(A) Analysis of hemodynamic data, 6MWD, BNP concentration, and WHO-FC. Among 8 patients who did not undergo follow-up RHC, 5 patients were followed up only with echocardiography, 2 patients stopped taking one of the combination drugs because of an adverse event before follow-up RHC, and one patient underwent prostacyclin infusion before follow-up RHC. **(B)** Analysis of echocardiographic parameters. Among 6 patients who did not undergo follow-up echocardiography, 2 patients stopped taking one of the combination drugs because of an adverse event before follow-up RHC, 2 patients underwent prostacyclin infusion before follow-up RHC, and 2 patients had no echocardiographic data at the time of the first visit. BNP, B-type natriuretic peptide; RHC, right heart catheterization; WHO-FC, World Health Organization functional class; 6MWD, 6-minute walk distance.
