EUS-FNB, Endoscopic ultrasound guided fine needle biopsy

WD, well differentiation; MD, moderate differentiation; PD, poorly differentiation

N/A, not applicable

* KRAS was confirmed with targeted sequencing. But sanger sequencing was not performed due to low amount of DNA.

**. Final pathology was not confirmed in YPAC-21 because primary biopsy did not show the presence of atypical cell and second biopsy was impossible due to old age. But, computed tomography image and tumor marker showed pancreatic ductal adenocarcinoma
